 DR Novel isolated human Neuropilin-Hy1 and Neuropilin-Hy2 polypeptides
 PT useful for treating neurodegenerative diseases e.g. Alzheimer's
 PT disease, and for diagnosing and mapping genetic neuronal defects
 XX Disclosure; Page 131-132; 152pp; English.
 PS
 CC The invention relates to neuropilin-like polypeptide (neuropilin-Hy1 and
 CC neuropilin-Hy2) and their corresponding nucleic acids. The neuropilin-
 CC like polypeptides and polynucleotides are useful in modulating neuronal
 CC growth regenerative capacity, treating neurodegenerative diseases,
 CC diagnosing and mapping genetic neuronal defects and degenerative diseases
 CC like Alzheimer's disease and for treating learning and memory disorders.
 CC They are also useful for inducing angiogenesis, neovascularisation, as
 CC well as organ growth and development e.g. heart and other tissues.
 CC Antagonists of neuropilin-like polypeptides are useful for treating
 CC cancers and other malignant diseases. Neuropilin is used to treat
 CC platelet disorders e.g. thrombocytopaenia, plastic anaemia and paroxysmal
 CC nocturnal haemoglobinuria and is used in nerve tissue growth or
 CC regeneration, in wound healing, tissue repair and replacement and in
 CC healing of bones, incisions and ulcers. Compositions comprising the
 CC sequences of the invention are useful for treating diseases of peripheral
 CC nervous system e.g. Parkinson's disease, Huntington's disease, Shy-Drager
 CC syndrome, amyotrophic lateral sclerosis, and traumatic disorders e.g.
 CC spinal cord disorders, head trauma and cerebrovascular diseases e.g.
 CC stroke, ulcers, immune deficiencies and immune disorders, infections by
 CC hepatitis viruses, human immunodeficiency virus (HIV), herpes viruses,
 CC mycobacteria, Leishmania spp., malaria spp., autoimmune disorders e.g.
 CC multiple sclerosis, systemic lupus erythematosus, rheumatoid arthritis,
 CC autoimmune pulmonary inflammation, autoimmune thyroiditis, diabetes
 CC mellitus, graft-versus-host disease, myasthenia gravis and autoimmune
 CC inflammatory eye disease. The nucleic acids of the invention are used in
 CC gene therapy techniques. The present sequence is human neuropilin-Hy2
 CC mature protein.

XX New isolated polynucleotide and encoded polypeptides, useful in
PT diagnostics, forensics, gene mapping, identification of mutations
PT responsible for genetic disorders or other traits and to assess
PT biodiversity

XX Claim 20; SEQ ID NO 31657; 103pp; English.

XX The invention relates to isolated polynucleotide (I) and
CC polypeptide (II) sequences. (I) is useful as hybridisation probes,
CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome
CC and gene mapping, and in recombinant production of (II). The
CC polynucleotides are also used in diagnostics as expressed sequence tags
CC for identifying expressed genes. (I) is useful in gene therapy techniques
CC to restore normal activity of (II) or to treat disease states involving
CC (II). (II) is useful for generating antibodies against it, detecting or
CC quantitating a polypeptide in tissue, as molecular weight markers and as
CC a food supplement. (II) and its binding partners are useful in medical
CC imaging of sites expressing (II). (I) and (II) are useful for treating
CC disorders involving aberrant protein expression or biological activity.
CC The polypeptide and polynucleotide sequences have applications in
CC diagnostics, forensics, gene mapping, identification of mutations
CC responsible for genetic disorders or other traits to assess biodiversity
CC and to produce other types of data and products dependent on DNA and
CC amino acid sequences. ABG00010-ABG30377 represent novel human
CC diagnostic amino acid sequences of the invention.

CC Note: the sequence data for this patent did not appear in the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/published_pct_sequences.

XX
PT Novel nucleic acid encoding human CUB-domain containing protein, useful
PT for drug screening, diagnosis and treatment of physiological disorders
PT or diseases -
XX
PS Claim 2; Page 27-28; 33pp; English.

The sequence represents a novel human protein (NHP) containing a CUB domain (an extracellular domain). CUB proteins have been associated with regulating development, modulating cellular processes and preventing infectious disease. NHP nucleotide sequences are useful for gene therapy of physiological disorders or diseases. NHP oligonucleotides are useful as hybridisation probes for screening libraries and assessing gene patterns. NHP nucleotide sequences are useful for detecting mutant or inappropriately expressed NHPs (for example, those proteins associated with obesity, high blood pressure, connective tissue disorders and infertility) for the diagnosis of a disease. The polynucleotides may also be used in screening for drugs effective in the treatment of symptomatic or phenotypic manifestations of perturbing the normal function of NHP in the body. Nucleotide constructs encoding NHP products are used to genetically engineer host cells to express such products in vivo. These host cells allow for the identification of compounds that bind to NHP receptors or trigger NHP-mediated pathways.

Novel nucleic acid encoding human CUB-domain containing protein, useful
for drug screening, diagnosis and treatment of physiological disorders
or diseases

Claim 4; Page 26; 33pp; English.

The sequence represents a novel human protein (NHP) containing a CUB
domain (an extracellular domain). CUB proteins have been associated with
regulating development, modulating cellular processes and preventing
infectious disease. NHP nucleotide sequences are useful for gene therapy
of physiological disorders or diseases. NHP oligonucleotides are useful
as hybridization probes for screening libraries and assessing gene
patterns. NHP nucleotide sequences are useful for detecting mutant or
inappropriately expressed NHPs (for example, those proteins associated
with obesity, high blood pressure, connective tissue disorders and
infertility) for the diagnosis of a disease. The polynucleotides may also
be used in screening for drugs effective in the treatment of symptomatic
or phenotypic manifestations of perturbing the normal function of NHP in
the body. Nucleotide constructs encoding NHP products are used to
genetically engineer host cells to express such products in vivo. These
host cells allow for the identification of compounds that bind to NHP
receptors or trigger NHP-mediated pathways.

 PT Novel isolated human Neuropilin-Hy1 and Neuropilin-Hy2 polypeptides
 PT useful for treating neurodegenerative diseases e.g. Alzheimer's
 PT disease, and for diagnosing and mapping genetic neuronal defects
 XX
 PS Claim 3; Page 123-125; 152pp; English.
 XX
 CC The invention relates to neuropilin-like polypeptide (neuropilin-Hy1 and
 CC neuropilin-Hy2) and their corresponding nucleic acids. The neuropilin-
 CC like polypeptides and polynucleotides are useful in modulating neuronal
 CC growth regenerative capacity, treating neurodegenerative diseases,
 CC diagnosing and mapping genetic neuronal defects and degenerative diseases
 CC like Alzheimer's disease and for treating learning and memory disorders.
 CC They are also useful for inducing angiogenesis, neovascularisation, as
 CC well as organ growth and development e.g. heart and other tissues.
 CC Antagonists of neuropilin-like polypeptides are useful for treating
 CC cancers and other malignant diseases. Neuropilin is used to treat

CC platelet disorders e.g. thrombocytopaenia, plastic anaemia and paroxysmal
 CC nocturnal haemoglobinuria and is used in nerve tissue growth or
 CC regeneration, in wound healing, tissue repair and replacement and in
 CC healing of bones, incisions and ulcers. Compositions comprising the
 CC sequences of the invention are useful for treating diseases of peripheral
 CC nervous system e.g. Parkinson's disease, Huntington's disease, Shy-brager
 CC syndrome, amyotrophic lateral sclerosis, and traumatic disorders e.g.
 CC spinal cord disorders, head trauma and cerebrovascular diseases e.g.
 CC stroke, ulcers, immune deficiencies and immune disorders, infections by
 CC hepatitis viruses, human immunodeficiency virus (HIV), herpes viruses,
 CC mycobacteria, Leishmania spp., malaria spp., autoimmune disorders e.g.
 CC multiple sclerosis, systemic lupus erythematosus, rheumatoid arthritis,
 CC autoimmune pulmonary inflammation, autoimmune thyroiditis, diabetes
 CC mellitus, graft-versus-host disease, myasthenia gravis and autoimmune
 CC inflammatory eye disease. The nucleic acids of the invention are used in
 CC gene therapy techniques. The present sequence is human neuropilin-Hyl
 CC protein. Neuropilin-Hyl gene is located on chromosome 6q21.

XX New neuropilin-like polypeptides for diagnosing, preventing and
 PT treating neurological conditions and disorders, cancers, and for
 PT inducing angiogenesis and neovascularisation

XX Claim 3; Page 118-120; 144pp; English.

XX The invention relates to an isolated neuropilin-like polypeptide
 CC including neuropilin-Hyl and neuropilin-Hy2, the full length cDNAs
 CC encoding the proteins and the coding regions of the cDNAs. Also included
 CC is a nucleic acid array comprising the cDNAs attached to a surface used
 CC for detecting full-matches or mismatches to the cDNAs. The genes
 CC for neuropilin-Hyl and Hy2 are located on human chromosome 6q21.
 CC The nucleic acid array is useful for detecting full-matches or mismatches
 CC to the cDNAs. The neuropilin-like proteins and encoding cDNAs are useful
 CC in modulating neuronal growth, regenerative capacity, treating
 CC neurodegenerative diseases, learning and memory disorders, diagnosing and
 CC mapping genetic neuronal defects and degenerative diseases like
 CC Alzheimer's disease, for inducing angiogenesis, and neovascularisation
 CC and organ growth and development (e.g. the heart). The nervous system
 CC disorders include lesions of central or peripheral nervous systems,
 CC including traumatic lesions, ischaemic lesions, infectious diseases,
 CC degenerative lesions, lesions associated with nutritional diseases or
 CC disorders, neurological lesions, and lesions caused by toxic substances.
 CC The neuropilin-like proteins and cDNAs are also useful as markers for
 CC cancers. The neuropilin-like proteins are useful for regulating cell
 CC proliferation, cell differentiation, stem cell growth factor activity,
 CC for inducing proliferation of neural cells, regeneration of nerve and
 CC brain tissue, for treatment of central and peripheral nervous system
 CC diseases, and neuropathies, such as Parkinson's disease,
 CC Huntington's disease, amyotrophic lateral sclerosis, to regulate
 CC haematopoiesis and treat myeloid and lymphoid cell disorders, various
 CC anaemias, and platelet disorders, such as thrombocytopaenia,
 CC regeneration and treatment of lung or liver fibrosis, reperfusion
 CC injury in various tissues and as a food supplement or molecular
 CC weight marker. The cDNAs are useful in gene identification, genome
 CC mapping, transgenics, as hybridisation probes, for primer design, for
 CC gene chips and as a DNA antigen. The present sequence represents
 CC neuropilin-Hyl.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

RL J. Biol. Chem. 275:18040-18045(2000).
CC -!- FUNCTION: THE MEMBRANE-BOUND ISOFORM IS A RECEPTOR INVOLVED IN THE DEVELOPMENT OF THE CARDIOVASCULAR SYSTEM, IN ANGIOGENESIS, IN THE FORMATION OF CERTAIN NEURONAL CIRCUITS AND IN ORGANOREGULATION OUTSIDE THE NERVOUS SYSTEM. IT MEDIATES THE CHEMOREPULSANT ACTIVITY OF SEMAPHORINS. IT BINDS TO SEMAPHORIN 3A, THE PLGF-2 ISOFORM OF PCF, THE VEGF-165 ISOFORM OF VEGF AND VEGF-B. COEXPRESSION WITH KDR RESULTS IN INCREASED VEGF-165 BINDING TO KDR AS WELL AS INCREASED CHEMOTAXIS. IT MAY REGULATE VEGF-INDUCED ANGIOGENESIS.
CC -!- FUNCTION: THE SOLUBLE/SNRP1 ISOFORM BINDS VEGF-165 AND APPEARS TO INHIBIT ITS BINDING TO CELLS. IT MAY ALSO INDUCE APOPTOSIS BY SEQUESTERING VEGF-165. MAY BIND AS WELL VARIOUS MEMBERS OF THE SEMAPHORIN FAMILY. ITS EXPRESSION HAS AN AVERSE EFFECT ON BLOOD VESSEL NUMBER AND INTEGRITY.
CC -!- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN. THE SOLUBLE/SNRP1 ISOFORM IS SECRETED.
CC -!- ALTERNATIVE PRODUCTS: 2 ISOFORMS; MEMBRANE-BOUND (SHOWN HERE) AND SOLUBLE/SNRP1; ARE PRODUCED BY ALTERNATIVE SPLICING.
CC -!- TISSUE SPECIFICITY: THE EXPRESSION OF MEMBRANE-BOUND AND SOLUBLE/SNRP1 ISOFORMS DOES NOT SEEM TO OVERLAP. THE MEMBRANE-BOUND ISOFORM IS EXPRESSED BY THE BLOOD VESSELS OF DIFFERENT TISSUES. IN THE DEVELOPING EMBRYO IT IS FOUND PREDOMINANTLY IN THE NERVOUS SYSTEM. IN ADULT TISSUES, IT IS HIGHLY EXPRESSED IN HEART AND PLACENTA; MODERATELY IN LUNG, LIVER, SKELETAL MUSCLE, KIDNEY

CC	AND PANCREAS; AND LOW IN ADULT BRAIN. THE SOLUBLE/SNRP1 ISOFORM IS
CC	FOUND IN LIVER HEPATOCYTES, KIDNEY DISTAL AND PROXIMAL TUBULES.
CC	-1- SIMILARITY: BELONGS TO THE NEUROPILIN FAMILY.
CC	-1- SIMILARITY: CONTAINS 2 CUB DOMAINS.
CC	-1- SIMILARITY: CONTAINS 2 F5/8 TYPE C DOMAINS.
CC	-1- SIMILARITY: CONTAINS 1 MAM DOMAIN.

RT "Porcine factor V: cDNA cloning, gene mapping, three-dimensional
RT protein modeling of membrane binding sites and comparative anatomy of
RT domains";
RL Cell. Mol. Life Sci. 58:148-159(2001).
CC -1- FUNCTION: Coagulation factor V is a cofactor that participates
CC with factor Xa to activate prothrombin to thrombin.
CC -1- SUBUNIT: Factor Va is composed of a heavy chain and a light
CC chain, noncovalently bound. The interaction between the two chains
CC is calcium-dependent.
CC -1- DOMAIN: Domain B contains 41 X 9 AA tandem repeats. Domains C1
CC and C2 may be involved in membrane binding.
CC -1- PMF: Thrombin activates factor V proteolytically to the active
CC cofactor, factor Va (formation of a heavy chain at the N-
CC terminus and a light chain at the C-terminus).
CC -1- SIMILARITY: CONTAINS 3 F5/8 TYPE A DOMAINS; EACH IS COMPOSED OF
CC 2 PLASTOCYANIN-LIKE REPEATS.
CC -1- SIMILARITY: CONTAINS 2 F5/8 TYPE C DOMAINS.
CC -1- SIMILARITY: STRONG, TO COAGULATION FACTOR VIII.

(Pharmacia) with a modified polylinker; Site: 1: EcoR I;
Site: 2: Not I; NCI_CGAP_Ed1 is a normalized cDNA library
containing the following tissue(s): Chondrosarcoma cell
line C95. The library was constructed according to Bonaldo
, Lennon and Soares, Genome Research, 6:791-806, 1996.
First strand cDNA synthesis was primed with an oligo-dT
primer containing a Not I site. Double stranded cDNA was
ligated to an EcoR I adaptor, digested with Not I, and
cloned directionally into pT7T3-Pac vector. The
oligonucleotide used to prime the synthesis of
first-strand cDNA contains a library tag sequence that is
located between the Not I site and the (dT)18 tail. The
sequence tag for this library is GCTCAGGCT.

coagulation factor V precursor - bovine
C:Species: Bos primigenius taurus (cattle)
C>Date: 04-Mar-1993 #sequence_revision 28-Apr-1995 #text_change 11-Jun-1999
C:Accession: A42580; A36457
R:Guinto, E.R.; Esmon, C.T.; Mann, K.G.; MacGillivray, R.T.
J. Biol. Chem. 267, 2971-2978, 1992
A:Title: The complete cDNA sequence of bovine coagulation factor V.
A:Reference number: A42580; MUID:92147638; PMID:1737753
A:Accession: A42580
A:Molecule type: mRNA
A:Residues: 1-2211 <GUI>
A:Cross-references: GB:M81440; NID:G163037; PID:AAA30512.1; PID:G163038
A:Note: sequence extracted from NCBI backbone (NCBIN:80774, NCBIP:80776)
R:Kalafatis, M.; Jenny, R.J.; Mann, K.G.
J. Biol. Chem. 265, 21580-21589, 1990
A:Title: Identification and characterization of a phospholipid-binding site of bovine
A:Reference number: A36497; MUID:91072354; PMID:2254316
A:Accession: A36497
A:Molecule type: protein
A:Residues: 1566-1570, 'X', 1572-1581, 'X', 1583-1584, 1673-1676, 'X', 1678-1679, 'X', 1681, 'X'
R:Xue, J.; Kalafatis, M.; Silveira, J.R.; Kung, C.; Mann, K.G.
Biochemistry 33, 13109-13116, 1994
A:Title: Determination of the disulfide bridges in factor Va heavy chain.
A:Reference number: A55979; MUID:95034740; PMID:7947716
A:Contents: annotation
A:Note: 566-Cys and 617-Cys were shown to have free sulphydryls
C:Comment: Factor V is activated by thrombin and partially by coagulation factor Xa.
C:Function:
A:Description: acts as a cofactor, with calcium and phospholipid, for the factor Xa p
A:Pathway: blood coagulation
C:Superfamily: coagulation factor V; discoidin I amino-terminal homology; ferroxidase
C:Keywords: blood coagulation; duplication; glycoprotein; phospholipid binding; plasm
F:1-28/Domain: signal sequence #status predicted <SIG>
F:29-2211/Product: coagulation factor V #status predicted <MAT>
F:29-741/Product: coagulation factor Va heavy chain #status predicted <VAH>

Database : SwissProt_40.*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

RT	"Porcine factor V: cDNA cloning, gene mapping, three-dimensional	
RT	protein modeling of membrane binding sites and comparative anatomy of	
RT	domains."	
RL	Cell. Mol. Life Sci. 58:148-159(2001).	
CC	-!- FUNCTION: Coagulation factor V is a cofactor that participates	
CC	with factor Xa to activate prothrombin to thrombin.	
CC	-!- SUBUNIT: Factor Va is composed of a heavy chain and a light	
CC	chain, noncovalently bound. The interaction between the two chains	
CC	is calcium-dependent.	
CC	-!- DOMAIN: Domain B contains 41 X 9 AA tandem repeats. Domains C1	
CC	and C2 may be involved in membrane binding.	
CC	-!- PTM: Thrombin activates factor V proteolytically to the active	
CC	cofactor, factor Va (formation of a heavy chain at the N-	
CC	terminus and a light chain at the C-terminus).	
CC	-!- SIMILARITY: CONTAINS 3 F5/8 TYPE A DOMAINS; EACH IS COMPOSED OF	
CC	2 PLASTOCYANIN-LIKE REPEATS.	
CC	-!- SIMILARITY: CONTAINS 2 F5/8 TYPE C DOMAINS.	
CC	-!- SIMILARITY: STRONG, TO COAGULATION FACTOR VIII.

CC -1- FUNCTION: COAGULATION FACTOR V IS A COFACTOR THAT PARTICIPATES
CC WITH FACTOR XA TO ACTIVATE PROTHROMBIN TO THROMBIN.
CC -1- SUBUNIT: Factor Va is composed of a heavy chain and a light
CC chain, noncovalently bound. The interaction between the two chains
CC is calcium-dependent.
CC -1- DOMAIN: DOMAIN B CONTAINS 35 X 9 AA TANDEM REPEATS, AND 2 X 17 AA
CC REPEATS.
CC -1- PTM: Thrombin activates factor V proteolytically to the active
CC cofactor, factor Va (formation of a heavy chain at the N-
CC terminus and a light chain at the C-terminus).
CC -1- PTM: SULFATION IS REQUIRED FOR EFFICIENT THROMBIN CLEAVAGE AND
CC ACTIVATION AND FOR FULL PROCOAGULANT ACTIVITY.
CC -1- DISEASE: OWREN PARAHEMOPHILIA, AN HEMORRHAGIC DIATHESIS, IS DUE
CC TO A DEFICIENCY OF FACTOR V. OTHER DEFECTS IN F5 RESULTS IN A
CC FORM OF THROMBOPHILIA KNOWN AS APC RESISTANCE (APCR). THE APC
CC MUTATION IS FOUND IN ABOUT 5% OF THE POPULATION WHICH SUGGEST THAT
CC A SLIGHT THROMBOTIC TENDENCY MAY CONFER SOME ADVANTAGE IN FETAL
CC IMPLANTATION.
CC -1- SIMILARITY: CONTAINS 3 F5/8 TYPE A DOMAINS: EACH IS COMPOSED OF
CC 2 PLASTOCYANIN-LIKE REPEATS.
CC -1- SIMILARITY: CONTAINS 2 F5/8 TYPE C DOMAINS.
CC -1- SIMILARITY: STRONG, TO COAGULATION FACTOR VIII.

 CC -1- FUNCTION: FACTOR VIII, ALONG WITH CALCIUM AND PHOSPHOLIPID, ACTS
 CC AS A COFACTOR FOR FACTOR IXA WHEN IT CONVERTS FACTOR X TO THE
 CC ACTIVATED FORM, FACTOR XA.
 CC -1- SUBCELLULAR LOCATION: Extracellular.
 CC -1- SIMILARITY: CONTAINS 3 F5/8 TYPE A DOMAINS; EACH IS COMPOSED OF
 CC 2 PLASTOCYANIN-LIKE REPEATS.
 CC -1- SIMILARITY: CONTAINS 2 F5/8 TYPE C DOMAINS.
 CC -1- SIMILARITY: STRONG, TO COAGULATION FACTOR V.

 RT developing chick nervous system.";
 RL Dev. Biol. 170:207-222(1995).
 CC -1- FUNCTION: RECEPTOR INVOLVED IN THE DEVELOPMENT OF THE
 CC CARDIOVASCULAR SYSTEM, IN ANGIOGENESIS, IN THE FORMATION OF
 CC CERTAIN NEURONAL CIRCUITS AND IN ORGANOGENESIS OUTSIDE THE NERVOUS
 CC SYSTEM. IT MEDIATES THE CHEMOREPULSANT ACTIVITY OF SEMAPHORINS (BY
 CC SIMILARITY). SEEMS TO HAVE CALCIUM-INDEPENDENT CELL ADHESION
 CC PROPERTIES.
 CC -1- SUBCELLULAR LOCATION: Type I membrane protein.
 CC -1- TISSUE SPECIFICITY: DEVELOPING NERVOUS SYSTEM; OPTIC TECTUM
 CC (LAYERS D AND E OF SGF), AMACRINE CELLS OF RETINA, NEURITES OF
 CC DORSAL ROOT GANGLIA. ALSO EXPRESSED IN NONNEURONAL CELLS, E.G.
 CC BLOOD VESSELS IN THE ENTIRE EMBRIO.
 CC -1- SIMILARITY: BELONGS TO THE NEUROPILIN FAMILY.
 CC -1- SIMILARITY: CONTAINS 2 CUB DOMAINS.
 CC -1- SIMILARITY: CONTAINS 2 F5/8 TYPE C DOMAINS.
 CC -1- SIMILARITY: CONTAINS 1 MAM-DOMAIN.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

XX
XX Factor 8 homolog polypeptides and nucleic acids encoding them for
PT treating coagulation related disorders such as hemophilia and stroke
XX
XX Claim 1; Page 61-64; 68pp; English.
XX
XX The present sequence is a cDNA encoding human Factor 8 homologue (F8H)
CC which is a coagulation cofactor. The protein is selectively expressed in
CC haematopoietic, heart and reproductive tissues. It has haemostatic and
CC cerebroprotective activities. The F8H contains a Factor 5/8 signature
CC and is useful as a therapeutic for treating coagulation related diseases
CC such as haemophilia and stroke. The nucleic acid is useful as
CC hybridisation probe and amplification primer for detecting deficiencies
CC in the level of F8H mRNA, for screening F8H gene mutations and for
CC monitoring regulation of gene expression. Fragments of the nucleic acid
CC are also useful as diagnostic probes and primers, and can be used in
CC screening methods such as those using DNA chips. The present sequence is
CC also useful as a target to screen therapeutically useful modulators
CC of the F8H.

XX
XX New isolated polynucleotide and encoded polypeptides, useful in
PT diagnostics, forensics, gene mapping, identification of mutations
PT responsible for genetic disorders or other traits and to assess
PT biodiversity.
XX
XX Claim 1; SEQ ID No 1289; 103pp; English.
XX
XX The invention relates to isolated polynucleotide (I) and
CC polypeptide (II) sequences. (I) is useful as hybridisation probes,
CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome
CC and gene mapping, and in recombinant production of (II). The
CC polynucleotides are also used in diagnostics as expressed sequence tags
CC for identifying expressed genes. (I) is useful in gene therapy techniques
CC to restore normal activity of (II) or to treat disease states involving
CC (II). (II) is useful for generating antibodies against it, detecting or
CC quantitating a polypeptide in tissue, as molecular weight markers and as
CC a food supplement. (II) and its binding partners are useful in medical
CC imaging of sites expressing (II). (I) and (II) are useful for treating
CC disorders involving aberrant protein expression or biological activity.
CC The polypeptide and polynucleotide sequences have applications in
CC diagnostics, forensics, gene mapping, identification of mutations
CC responsible for genetic disorders or other traits to assess biodiversity
CC and to produce other types of data and products dependent on DNA and
CC amino acid sequences. AAS64197-AAS94564 represent novel human
CC diagnostic coding sequences of the invention.
CC Note: The sequence data for this patent did not appear in the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/published_pct_sequences.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

XX New neuropilin-like polypeptides for diagnosing, preventing and
XX treating neurological conditions and disorders, cancers, and for
XX inducing angiogenesis and neovascularisation
XX Claim 1; Page 121-123; 144pp; English.
XX The invention relates to an isolated neuropilin-like polypeptide
XX including neuropilin-Hy1 and neuropilin-Hy2, the full length cDNAs
XX encoding the proteins and the coding regions of the cDNAs. Also included
XX is a nucleic acid array comprising the cDNAs attached to a surface used
XX for detecting full-matches or mismatches to the cDNAs. The genes
XX for neuropilin-Hy1 and Hy2 are located on human chromosome 6q21.
XX The nucleic acid array is useful for detecting full-matches or mismatches
XX to the cDNAs. The neuropilin-like proteins and encoding cDNAs are useful
XX in modulating neuronal growth, regenerative capacity, treating
XX neurodegenerative diseases, learning and memory disorders, diagnosing and
XX mapping genetic neuronal defects and degenerative diseases like
XX Alzheimer's disease, for inducing angiogenesis, and neovascularisation
XX and organ growth and development (e.g. the heart). The nervous system
XX disorders include lesions of central or peripheral nervous systems,
XX including traumatic lesions, ischaemic lesions, infectious lesions,
XX degenerative lesions, lesions associated with nutritional diseases or
XX disorders, neurological lesions, and lesions caused by toxic substances.
XX The neuropilin-like proteins and cDNAs are also useful as markers for
XX cancers. The neuropilin-like proteins are useful for regulating cell
XX proliferation, cell differentiation, stem cell growth factor activity,
XX for inducing proliferation of neural cells, regeneration of nerve and
XX brain tissue, for treatment of central and peripheral nervous system
XX diseases, and neuropathies, such as Parkinson's disease,
XX Huntington's disease, amyotrophic lateral sclerosis, to regulate
XX haematopoiesis and treat myeloid and lymphoid cell disorders, various
XX anaemias, and platelet disorders, such as thrombocytopaenia,
XX regeneration and treatment of lung or liver fibrosis, reperfusion
XX injury in various tissues and as a food supplement or molecular
XX weight marker. The cDNAs are useful in gene identification, genome
XX mapping, transgenics, as hybridisation probes, for primer design, for
XX gene chips and as a DNA antigen. The present sequence encodes
XX neuropilin-Hy2.

subject to a pathogen or sterile inflammatory disease, by detecting the level of expression in a sample of the tissue of gene(s) from Gs, where the level of expression of the gene is indicative of inflammation; (4) treating (M5) an inflammation (especially chronic) or in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease, by contacting a tissue having inflammation with an agent that modulates the expression of gene(s) from Gs in the tissue. M1 is useful for detecting GCA; M2 is useful for modulating GA; M3 is useful for screening an agent capable of modulating GCA preferably in an inflammation in a tissue; M4 is useful for detecting an inflammation (especially chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease (e.g. psoriasis, rheumatoid arthritis, glomerulonephritis, asthma, thrombosis, cardiac reperfusion injury, renal reperfusion injury, ARDS, adult respiratory distress syndrome, inflammatory bowel disease, Crohn's disease, ulcerative colitis, periodontal disease; also bacterial infection, viral infection, parasitic infection, protozoal infection, fungal infection and M5 is useful for treating one of the above conditions. The present sequence represents a gene differentially expressed in granulocytes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at www.vivo.int/pub/published_pct_sequences.

XX	PT	An isolated polynucleotide for treating diseases associated with its	
XX	PS	encoded polypeptide such as cancer and multiple sclerosis -	
XX	PS	Claim 1; SEQ ID NO 210; 509pp; English.	
XX	CC	The present invention provides the protein and coding sequences of 444	
CC	CC	novel human proteins. These were isolated from expressed sequences tags	
CC	CC	(ESTs). They can be used to stimulate cell growth, to regulate	
CC	CC	haematopoiesis e.g. to treat aplastic anaemia, to help tissue regrowth	
CC	CC	e.g. in burn treatment, to regulate the immune system e.g. to treat	
CC	CC	multiple sclerosis, to regulate activin or inhibin e.g. to treat	
CC	CC	infertility, to regulate haemostasis or thrombolysis e.g. to treat	
CC	CC	stroke and cancer, to screen for drugs, to treat inflammatory condition	
CC	CC	e.g. rheumatoid arthritis, and to treat nervous system disorders e.g.	
CC	CC	Parkinson's disease. The present sequence is a coding sequence of the	
XX	XX	invention.

XX
PT Factor 8 homolog polypeptides and nucleic acids encoding them for
PT treating coagulation related disorders such as hemophilia and stroke
XX
XX
PS Claim 1; Page 61-64; 68pp; English.
PS
CC The present sequence is a cDNA encoding human Factor 8 homologue (F8H)
CC which is a coagulation cofactor. The protein is selectively expressed in
CC haematopoietic, heart and reproductive tissues. It has haemostatic and
CC cerebroprotective activities. The F8H contains a Factor 5/8 signature
CC and is useful as a therapeutic for treating coagulation related diseases
CC such as haemophilia and stroke. The nucleic acid is useful as
CC hybridisation probe and amplification primer for detecting deficiencies
CC in the level of F8H mRNA, for screening F8H gene mutations and for
CC monitoring regulation of gene expression. Fragments of the nucleic acid
CC are also useful as diagnostic probes and primers, and can be used in
CC screening methods such as those using DNA chips. The present sequence is
CC also useful as a target to screen therapeutically useful modulators
CC of the F8H.

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

 Center project name: HClB
 Center clone name: CTD-2011L5
 ----- Summary Statistics
 Sequencing vector: Plasmid;
 Chemistry: Dye-terminator Big Dye; 100% of reads
 Assembly program: Phrap; version 0.990329
 Consensus quality: 161349 bases at least Q40
 Consensus quality: 162327 bases at least Q30
 Consensus quality: 162604 bases at least Q20
 Estimated insert size: 157933; sum-of-contigs estimation
 Quality coverage: 7x in Q20 bases; sum-of-contigs estimation

 * NOTE: Estimated insert size may differ from sequence length
 * (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
 * NOTE: This is a 'working draft' sequence. It currently
 * consists of 8 contigs. The true order of the pieces
 * is not known and their order in this sequence record is
 * arbitrary. Gaps between the contigs are represented as
 * runs of N, but the exact sizes of the gaps are unknown.
 * This record will be updated with the finished sequence
 * as soon as it is available and the accession number will
 * be preserved.
 *
 * 1 3452: contig of 3452 bp in length
 * 3453 3452: gap of unknown length
 * 3553 10549: contig of 6997 bp in length

 ----- Project Information
 Center project name: L7942
 Center clone name: 322_A_20

* NOTE: This record contains 164 individual
 * sequencing reads that have not been assembled into
 * contigs. Runs of N are used to separate the reads
 * and the order in which they appear is completely
 * arbitrary. Low-pass sequence sampling is useful for
 * identifying clones that may be gene-rich and allows
 * overlap relationships among clones to be deduced.
 * However, it should not be assumed that this clone
 * will be sequenced to completion. In the event that
 * the record is updated, the accession number will
 * be preserved.

RESULT 4
AF387549 2339 bp mRNA linear ROD 11-NOV-2001
LOCUS Rattus norvegicus endothelial and smooth muscle cell-derived
DEFINITION neurophilin-like protein (Esdn) mRNA, complete cds.
ACCESSION AF387549
VERSION AF387549.1 GI:16902438
KEYWORDS
SOURCE Rattus norvegicus.
ORGANISM Rattus norvegicus
Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
Mammalia; Eutheria; Rodentia; Sciurognathi; Muridae; Murinae;
Rattus.
1 (bases 1 to 2339)
Kobuke, K., Furukawa, Y., Sugai, M., Tanigaki, K., Ohashi, N.,
Matsumori, A., Sasayama, S., Honjo, T. and Tashiro, K.
ESDN, a novel neurophilin-like membrane protein cloned from vascular
cells with the longest secretory signal sequence among eukaryotes,
is up-regulated after vascular injury (2001)
J. Biol. Chem. 276 (36), 34105-34114 (2001)

PT Human genome-derived single exon nucleic acid probes useful for
PT analyzing gene expression in human bone marrow -
XX
PS Example 4; SEQ ID NO: 26008; 658pp + Sequence Listing; English.
XX
CC The present invention provides a number of single exon nucleic acid
CC probes which are derived from genomic sequences expressed in the human
CC bone marrow. They can be used to measure gene expression in bone marrow
CC samples, which may enable the improved diagnosis and treatment of cancers
CC such as lymphoma, leukaemia and myeloma. The present sequence is one of
CC the probes of the invention.

PT Human genome-derived single exon nucleic acid probes useful for
PT analyzing gene expression in human placenta -
XX
PS Claim 25; SEQ ID NO 26227; 654pp; English.
XX
CC The present invention relates to single exon nucleic acid probes (SENPs).
CC The present sequence is one such probe. The probes are useful for
CC producing a microarray for predicting, measuring and displaying gene
CC expression in samples derived from human placenta. The probes are useful
CC for antenatal diagnosis of human genetic disorders.

XX PT Polymorphic nucleic acid sequences, useful in genetic testing and
 PT therapy -

XX PS Claim 1; Page 171; 2653pp; English.

XX CC AAI73060 to AAI79867 represent isolated human polymorphic polynucleotide
 CC sequences (I), which contain single nucleotide polymorphisms (SNPs).
 CC AAI73114 to AAI73329 represent peptides related to human polymorphic
 CC polynucleotide sequences. The sequences can be used in gene and protein
 CC therapy, and in vaccine production. (I) and the polypeptides encoded by
 CC them may be used in the prevention, diagnosis and treatment of diseases
 CC associated with inappropriate expression of polymorphic polypeptides.
 CC For example, (I) may be used to treat disorders by rectifying mutations
 CC or deletions in a patient's genome that affect the activity of
 CC polypeptides by expressing inactive proteins or to supplement the
 CC patients own production of polypeptide. Additionally, (I) and its
 CC complementary sequences may also be used as DNA probes in diagnostic
 CC assays to detect and quantitate the presence of similar nucleic acids
 CC in samples, and therefore which patients may be in need of restorative
 CC therapy. The polypeptides encoded by (I) may be used as antigens in the
 CC production of antibodies specific for polymorphic polypeptides. The
 CC antibodies may also be used to down regulate expression and activity.
 CC The antibodies may also be used as diagnostic agents for detecting the
 CC presence of polymorphic polypeptides in samples.

PT Polynucleotides encoding digestive system antigens, useful for
diagnosing, treating, preventing and/or prognosing disorders of the

PT digestive system, particularly cancer and cancer metastases -
XX Disclosure; SEQ ID NO 2665; 986pp; English..

XX The present invention provides the protein and coding sequences of a
CC number of human digestive system antigens. These can be used in the
CC diagnosis, treatment and prevention of digestive system disorders,
CC including cancer, Meckel's diverticulum, bacterial or parasitic
CC infections, appendicitis, Hirschsprung's disease, chronic colitis or
CC ulcerative colitis. The present sequence is a genomic DNA fragment
CC encoding a digestive system antigen of the invention.

XX
XX The present invention provides the protein and coding sequences of a
XX number of colorectal cancer antigens. These are shown in
XX AA157547-AA157619 and AAM38569-AAM38641. These can be used in the
XX diagnosis, prevention and treatment of cancer of the colon and/or rectum.
XX The present sequence is a colorectal cancer antigen genomic sequence.
XX Note: The sequence data for this patent did not form part of the printed
XX specification, but was obtained in electronic format directly from WIPO
XX at ftp.wipo.int/pub/published_pct_sequences.

Center clone name: 319_J_24
----- Summary Statistics

Sequencing vector: M13; M7815; 100% of reads
Chemistry: Dye-terminator Big Dye; 100% of reads
Assembly program: Phrap; version 0.960731
Consensus quality: 182870 bases at least Q40
Consensus quality: 187032 bases at least Q30
Consensus quality: 188925 bases at least Q20
Insert size: 194000; agarose-fp
Insert size: 191247; sum-of-contigs
Quality coverage: 5.0 in Q20 bases; agarose-fp
Quality coverage: 5.1 in Q20 bases; sum-of-contigs

***** NOTE: This is a 'working draft' sequence. It currently
* consists of 11 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

1 472: contig of 472 bp in length
* 473 572: gap of 100 bp
* 573 3945: contig of 3373 bp in length
* 3946 4045: gap of 100 bp
* 4046 11056: contig of 7011 bp in length
* 11057 11156: gap of 100 bp
* 11157 17728: contig of 6572 bp in length
* 17729 17828: gap of 100 bp
* 17829 30556: contig of 12728 bp in length
* 30557 30556: gap of 100 bp
* 30557 49294: contig of 18638 bp in length
* 49295 49394: gap of 100 bp
* 49395 64509: contig of 15115 bp in length
* 64510 64609: gap of 100 bp
* 64610 83042: contig of 18433 bp in length
* 83043 83142: gap of 100 bp

Direct Submission

Submitted (24-AUG-2002) Whitehead Institute/MIT Center for Genome Research, 320 Charles Street, Cambridge, MA 02141, USA

On Apr 12, 2000 this sequence version replaced gi:7230271.

All repeats were identified using RepeatMasker:

Smit, A.F.A. & Green, P. (1996-1997)

http://ftp.genome.washington.edu/RM/RepeatMasker.html

----- Genome Center

Center: Whitehead Institute/ MIT Center for Genome Research

Center code: WIBR

Web site: http://www-seq.wi.mit.edu

Contact: sequence.submissions@genome.wi.mit.edu

----- Project Information

Center project name: L7942

Center clone name: 322_A_20

* NOTE: This record contains 164 individual

* sequencing reads that have not been assembled into

* contigs. Runs of N are used to separate the reads

* and the order in which they appear is completely

* arbitrary. Low-pass sequence sampling is useful for

* identifying clones that may be gene-rich and allows

* overlap relationships among clones to be deduced.

* However, it should not be assumed that this clone

* will be sequenced to completion. In the event that

* the record is updated, the accession number will

* be preserved.

* 1 836: contig of 836 bp in length

* 837 936: gap of 100 bp

* 937 1748: contig of 812 bp in length

* 1749 1848: gap of 100 bp

* 1849 2680: contig of 832 bp in length

* 2681 2780: gap of 100 bp

* 2781 3534: contig of 754 bp in length

* 3535 3634: gap of 100 bp

* 3635 4383: contig of 749 bp in length

* 4384 4483: gap of 100 bp

* 4484 5261: contig of 778 bp in length

* 5261: contig of 778 bp in length

* 5261: contig of 778 bp in length

* 5261: contig of 778 bp in length

* 5261: contig of 778 bp in length

* 5261: contig of 778 bp in length

* 5261: contig of 778 bp in length

This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known, annotated human repeat sequence elements (e.g. Alu). Where the sequence is ambiguous, there is an annotation using the 'unsure' feature key.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, ENBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at

<http://www.sanger.ac.uk/projects/Celegans/wormpep> This sequence was generated from part of bacterial clone contigs of human chromosome 6, constructed by the Sanger Centre Chromosome 6 Mapping Group. Further information can be found at <http://www.sanger.ac.uk/HGP/Chr6>

ncsp://www.bacpac.med.buffalo.edu/

VECTION: PERFECT
This sequence is the entire insert of clone RP1-209A6.

* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently
* consists of 49 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.
*
* 1170: contig of 1170 bp in length
* 1270: gap of unknown length

Sequencing vector: Plasmid;

Chemistry: Dye-terminator Big Dye; 100% of reads

Assembly program: Phrap; version 0.990329

Consensus quality: 120335 bases at least Q40

Consensus quality: 127623 bases at least Q30

Consensus quality: 133514 bases at least Q20

* NOTE: Estimated insert size may differ from sequence length
 (see http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html).

* NOTE: This is a 'working draft' sequence. It currently

* consists of 60 contigs. The true order of the pieces

* is not known and their order in this sequence record is

* arbitrary. Gaps between the contigs are represented as

* runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence

* as soon as it is available and the accession number will

* be preserved.

 ----- Genome Center
 Center: Baylor College of Medicine
 Center code: BCM
 Web site: http://www.hgsc.bcm.tmc.edu/
 Contact: hgsc-help@bcm.tmc.edu
 ----- Project Information
 Center project name: GAPK
 Center clone name: CH230-4E23
 ----- Summary Statistics
 Sequencing vector: Plasmid;
 Chemistry: Dye-terminator Big Dye; 100% of reads
 Assembly program: Phrap; version 0.990329
 Consensus quality: 135185 bases at least Q40
 Consensus quality: 140034 bases at least Q30
 Consensus quality: 143806 bases at least Q20

 * NOTE: Estimated insert size may differ from sequence length
 * (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
 * NOTE: This is a 'working draft' sequence. It currently
 * consists of 64 contigs. The true order of the pieces
 * is not known and their order in this sequence record is
 * arbitrary. Gaps between the contigs are represented as
 * runs of N, but the exact sizes of the gaps are unknown.
 * This record will be updated with the finished sequence
 * as soon as it is available and the accession number will
 * be preserved.

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

 ----- Project Information
 Center project name: L7942
 Center clone name: 322_A_20

* NOTE: This record contains 164 individual
 * sequencing reads that have not been assembled into
 * contigs. Runs of N are used to separate the reads
 * and the order in which they appear is completely
 * arbitrary. Low-pass sequence sampling is useful for
 * identifying clones that may be gene-rich and allows
 * overlap relationships among clones to be deduced.
 * However, it should not be assumed that this clone
 * will be sequenced to completion. In the event that
 * the record is updated, the accession number will
 * be preserved.

----- Summary Statistics -----

Sequencing vector: M13; M7815; 100% of reads
Chemistry: Dye-terminator Big Dye; version 0.960731
Assembly program: Phrap; version 0.960731
Consensus quality: 182870 bases at least Q40
Consensus quality: 187032 bases at least Q30
Consensus quality: 188925 bases at least Q20
Insert size: 194000; agarose-fp
Insert size: 191247; sum-of-contigs
Quality coverage: 5.0 in Q20 bases; agarose-fp
Quality coverage: 5.1 in Q20 bases; sum-of-contigs

NOTE: This is a 'working draft' sequence. It currently
consists of 11 contigs. The true order of the pieces
is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as
runs of N, but the exact sizes of the gaps are unknown.
This record will be updated with the finished sequence
as soon as it is available and the accession number will
be preserved.

TITLE
JOURNAL

Direct Submission

Submitted (25-MAY-2002) Human Genome Sequencing Center, Department

of Molecular and Human Genetics, Baylor College of Medicine, One

Baylor Plaza, Houston, TX 77030, USA

On May 25, 2002 this sequence version replaced gi:20429236.

INFORMATION: <http://www.hgsc.bcm.tmc.edu/> or email

gc-help@bcm.tmc.edu

CLONE LENGTH: This sequence does not necessarily represent the

entire insert of this clone. Overlapping regions of clones are only

sequenced and submitted once, so the sequence for the remainder of

the insert may be found in the record for the adjacent clones.

Overlapping clones are noted at the beginning and end of the

Features listing.

COMMENT

ANNOTATION OF FEATURES:

STSs are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and local mapping efforts.

Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences.

Genes and Res. of sequence similarity are identified by BLAST (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the EST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.

SEQUENCING READ COVERAGE: Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.

QUALITY OF INDIVIDUAL BASES: This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Reports of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found at URL: <http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation.html>.

            * NOTE: Estimated insert size may differ from sequence length
            * (see http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html).

```

* NOTE: This is a 'working draft' sequence. It currently
 * consists of 74 contigs. The true order of the pieces
 * is not known and their order in this sequence record is
 * arbitrary. Gaps between the contigs are represented as
 * runs of N, but the exact sizes of the gaps are unknown.
 * This record will be updated with the finished sequence
 * as soon as it is available and the accession number will
 * be preserved.

Center project name: H_NH0078N15
Drafting Center: WUGSC

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. John D. McPherson, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu/gsc

SOURCE INFORMATION:
The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa, K., Woon, P.Y., Zhao, B., Frengen, E., Tatenno, M., Catanese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at http://www.chori.org
VECTOR: pBACe3.6

NEIGHBORING SEQUENCE INFORMATION:
The clone sequenced to the left is RP11-315C24; the clone sequenced

to the right is RP11-70G18, 2000 bp overlap. Actual start of this clone is at base position 1 of RP11-78N15.

Data from AC093639 was used to finish this clone, AC073455. Polymorphisms exist between RP11-78N15 and RP11-315C24.

The sequence of AC073455 has been incorporated into AC096555.

Consensus quality: 108358 bases at least Q30
Consensus quality: 113449 bases at least Q20

* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently
* consists of 73 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

JOURNAL

COMMENT

Submitted (16-NOV-2001) Wellcome Trust Sanger Institute, Hinxton, Cambridgeshire, CB10 1SA, UK. E-mail enquiries: humquerry@sanger.ac.uk
 On Nov 17, 2001 this sequence version replaced g1:15131251.
 During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.
 This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em: EMBL; Sw: SWISSPROT; Tr: TrEMBL; Wp: WormPEP; Information on the WormPEP database can be found at
<http://www.sanger.ac.uk/Projects/C.elegans/wormpep>
 This sequence was generated from part of bacterial clone contigs of human chromosome 10, constructed by the Sanger Centre Chromosome 10 Mapping Group. Further information can be found at
<http://www.sanger.ac.uk/HGP/Chr10>
 RP11-327E2 is from the library RPCI-11.2 constructed by the group of Pieter de Jong. For further details see
<http://www.chori.org/bacpac/home.htm>
 VECTOR: pBAC3.6
 This sequence is the entire insert of clone RP11-327E2 The true right end of clone RP11-5801 is at 37643 in this sequence.

XX
XX Novel isolated human Neuropilin-Hy1 and Neuropilin-Hy2 polypeptides
XX useful for treating neurodegenerative diseases e.g. Alzheimer's
XX disease, and for diagnosing and mapping genetic neuronal defects
XX
XX Claim 1; Page 126-128; 152pp; English.
XX
XX The invention relates to neuropilin-like polypeptide (neuropilin-Hy1 and
XX neuropilin-Hy2) and their corresponding nucleic acids. The neuropilin-
XX like polypeptides and polynucleotides are useful in modulating neuronal
XX growth regenerative capacity, treating neurodegenerative diseases,
XX diagnosing and mapping genetic neuronal defects and degenerative diseases
XX like Alzheimer's disease and for treating learning and memory disorders.
XX They are also useful for inducing angiogenesis, neovascularisation, as
XX well as organ growth and development e.g. heart and other tissues.
XX Antagonists of neuropilin-like polypeptides are useful for treating
XX cancers and other malignant diseases. Neuropilin is used to treat
XX platelet disorders e.g. thrombocytopaenia, plastic anaemia and paroxysmal
XX nocturnal haemoglobinuria and is used in nerve tissue growth or
XX regeneration, in wound healing, tissue repair and replacement and in
XX healing of bones, incisions and ulcers. Compositions comprising the
XX sequences of the invention are useful for treating diseases of peripheral
XX nervous system e.g. Parkinson's disease, Huntington's disease, Shy-Drager
```

CC syndrome, amytrophic lateral sclerosis, and traumatic disorders e.g.
CC spinal cord disorders, head trauma and cerebrovascular diseases e.g.
CC stroke, ulcers, immune deficiencies and immune disorders, infections by
CC hepatitis viruses, human immunodeficiency virus (HIV), herpes viruses,
CC mycobacteria, *Leishmania* spp., malaria spp., autoimmune disorders e.g.
CC multiple sclerosis, systemic lupus erythematosus, rheumatoid arthritis,
CC autoimmune pulmonary inflammation, autoimmune thyroiditis, diabetes
CC mellitus, graft-versus-host disease, myasthenia gravis and autoimmune
CC inflammatory eye disease. The nucleic acids of the invention are used in
CC gene therapy techniques. The present sequence is human neuropilin-Hy2
CC DNA. Neuropilin-Hy2 gene is located on chromosome 6q21.

PT Detecting granulocyte activation by detecting differential expression
PT of genes associated with granulocyte activation, which serves as
PT diagnostic markers that is useful for monitoring disease states and
PT drug toxicity
XX
PS Claim 1; SEQ ID No 211; 114pp; English.
XX
CC The invention relates to detecting (M1) granulocyte (GC) activation
CC (GCA), by detecting the level of expression of gene(s) (Gs) identified by
CC DNA chip analysis as given in the specification, and comparing
CC the expression level to an expression level in an unactivated
CC GC, where differential expression of Gs is indicative of GCA.
CC Also included are modulating (M2) GA by contacting GC with an agent
CC that alters the expression of at least one gene in Gs; (2) screening (M3)
CC for an agent capable of modulating GCA or an inflammation (especially
CC chronic) in a tissue, an allergic response in a subject, exposure of a
CC subject to a pathogen or sterile inflammatory disease using the
CC gene expression profile; (3) detecting (M4) an inflammation (especially
CC chronic) in a tissue, an allergic response in a subject, exposure of a
CC subject to a pathogen or sterile inflammatory disease, by detecting the
CC level of expression in a sample of the tissue of gene(s) from Gs, where
CC the level of expression of the gene is indicative of inflammation;
CC (4) treating (M5) an inflammation (especially chronic) or in a tissue,
CC an allergic response in a subject, exposure of a subject to a pathogen
CC or sterile inflammatory disease, by contacting a tissue having
CC inflammation with an agent that modulates the expression of gene(s)
CC from Gs in the tissue. M1 is useful for detecting GCA; M2 is useful for
CC modulating GA; M3 is useful for screening an agent capable of modulating
CC GCA preferably in an inflammation in a tissue; M4 is useful for
CC detecting an inflammation (especially chronic) in a tissue, an allergic
CC response in a subject, exposure of a subject to a pathogen or sterile
CC inflammatory disease (e.g. psoriasis, rheumatoid arthritis,
CC glomerulonephritis, asthma, thrombosis, cardiac reperfusion injury, renal
CC reperfusion injury, ARDS, adult respiratory distress syndrome,
CC inflammatory bowel disease, Crohn's disease, ulcerative colitis,
CC periodontal disease; also bacterial infection, viral infection,
CC parasitic infection, protozoal infection, fungal infection and M5 is
CC useful for treating one of the above conditions. The present

CC sequence represents a gene differentially expressed in granulocytes.
 CC Note: The sequence data for this patent did not form part
 CC of the printed specification, but was obtained in electronic
 CC format directly from WIPO at
 CC ftp.wipo.int/pub/published_pct_sequences.

XX New isolated polynucleotide and encoded polypeptides, useful in
PT diagnostics, forensics, gene mapping, identification of mutations
PT responsible for genetic disorders or other traits and to assess
PT biodiversity.
XX Claim 1; SEQ ID No 1289; 103pp; English.
XX The invention relates to isolated polynucleotide (I) and
CC polypeptide (II) sequences. (I) is useful as hybridisation probes,
CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome
CC and gene mapping, and in recombinant production of (II). The
CC polynucleotides are also used in diagnostics as expressed sequence tags
CC for identifying expressed genes. (I) is useful in gene therapy techniques
CC to restore normal activity of (II) or to treat disease states involving
CC quantitating a polypeptide in tissue, as molecular weight markers and as
CC a food supplement. (II) and its binding partners are useful in medical
CC imaging of sites expressing (II). (I) and (II) are useful for treating
CC disorders involving aberrant protein expression or biological activity.
CC The polypeptide and polynucleotide sequences have applications in
CC diagnostics, forensics, gene mapping, identification of mutations
CC responsible for genetic disorders or other traits to assess biodiversity
CC and to produce other types of data and products dependent on DNA and
CC amino acid sequences. AAS6197-AAS94564 represent novel human
CC diagnostic coding sequences of the invention.
CC Note: The sequence data for this patent did not appear in the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/published_pct_sequences.

XX WPI; 2001-290917/30.
 DR P-PSDB; AAU00628.
 XX Novel nucleic acid encoding human CUB-domain containing protein, useful
 PT for drug screening, diagnosis and treatment of physiological disorders
 PT or diseases -
 XX Disclosure; Page 30-31; 33pp; English.
 PS
 XX The sequence represents a polynucleotide which encodes a novel human
 CC protein (NHP) containing a CUB domain (an extracellular domain). CUB
 CC proteins have been associated with regulating development, modulating
 CC cellular processes and preventing infectious disease. NHP nucleotide
 CC sequences are useful for gene therapy of physiological disorders or
 CC diseases. NHP oligonucleotides are useful as hybridisation probes for
 CC screening libraries and assessing gene patterns. NHP nucleotide sequences
 CC are useful for detecting mutant or inappropriately expressed NHPs (for
 CC example, those proteins associated with obesity, high blood pressure,
 CC connective tissue disorders and infertility) for the diagnosis of a
 CC disease. The polynucleotides may also be used in screening for drugs
 CC effective in the treatment of symptomatic or phenotypic manifestations of
 CC perturbing the normal function of NHP in the body. Nucleotide constructs
 CC encoding NHP products are used to genetically engineer host cells to
 CC express such products in vivo. These host cells allow for the
 CC identification of compounds that bind to NHP receptors or trigger
 CC NHP-mediated pathways.

PT Novel nucleic acids, used to develop products for the diagnosis and
PT treatment of disorders involving unwanted cell proliferation,
PT particularly cancers, especially colon cancer -
XX
PS Claim 15; Page 322; 469pp; English.
XX
CC AAZ79917 to AAZ80766 represent double stranded cDNA clones isolated from
CC the human colorectal adenocarcinoma (colon cancer) cell line SW480. The
CC cDNA clones can be used to generate antisense oligonucleotides which
CC can be used for antisense therapy. Methods and products from the present
CC invention can be used for identifying and/or classifying cancerous cells
CC present in a human tumour, particularly in solid tumours, e.g
CC carcinomas and sarcomas, e.g. breast or colon cancers. The cDNA clones
CC can be used for developing agents for the diagnosis and treatment of
CC disorders involving unwanted cell proliferation, such as neoplasia,
CC dysplasia or hyperplasia.

 DR Single exon nucleic acid probes for analyzing gene expression in human
 PT brains -
 XX Example 4; SEQ ID NO: 8966; 650pp + Sequence Listing; English.
 XX The present invention provides a number of single exon nucleic acid
 CC probes which are derived from genomic sequences expressed in the human
 CC brain. They can be used to measure gene expression in brain cell samples,
 CC which may enable the diagnosis and improved treatment of nervous system
 CC diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia,
 CC epilepsy and cancers. The present sequence is one of the probes of the
 CC invention.

XX Factor 8 homolog polypeptides and nucleic acids encoding them for
XX treating coagulation related disorders such as hemophilia and stroke

XX PS Claim 3; Page 64-66; 68pp; English.

XX CC The present sequence is a human Factor 8 homologue (F8H),

CC a coagulation cofactor which is selectively expressed in

CC haematopoietic, heart and reproductive tissues. It has haemostatic and

CC cerebroprotective activities. The F8H contains a Factor 5/8 signature

CC and is useful as a therapeutic for treating coagulation related diseases

CC such as haemophilia and stroke. The nucleic acid is useful as

CC hybridisation probe and amplification primer for detecting deficiencies

CC in the level of F8H mRNA, for screening F8H gene mutations and for

CC monitoring regulation of gene expression. Fragments of the nucleic acid

CC are also useful as diagnostic probes and primers, and can be used in

CC screening methods such as those using DNA chips. The present sequence is

CC also useful as a target to screen therapeutically useful modulators

CC of the F8H.

XX PT Nucleic acids encoding 4277 human colon cancer-associated polypeptides,

XX PS useful for preventing, diagnosing and/or treating colorectal cancers -

Claim 11; Page 7657-7660; 9803pp; English.

AAH32943 to AAH37195 and AAG73514 to AAG77788 represent human colon cancer-associated nucleic acid molecules (N) and proteins (P), where the proteins are collectively known as colon cancer antigens. The colon cancer antigens have cytostatic activity and can be used in gene therapy and vaccine production. N and P may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate P expression. For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expressing inactive proteins or to supplement the patient's own production of P. Additionally, N may be used to produce the colon cancer-associated Ps, by inserting the nucleic acids into a host cell and culturing the cell to express the proteins. N and P can be used in the prevention, diagnosis and treatment of colorectal carcinomas and cancers, AAH37196 to AAH37204 and AAG77789 represent sequences used in the exemplification of the present invention.

N.B. Pages 666 to 682 and page 7053 of the sequence listing were missing at time of publication, meaning no sequences are present for SEQ ID NO:1027 to 1052, 7921 and 7922.

XX

XX Novel isolated human Neuropilin-Hy1 and Neuropilin-Hy2 polypeptides
 PT useful for treating neurodegenerative diseases e.g. Alzheimer's
 PT disease, and for diagnosing and mapping genetic neuronal defects
 XX Claim 3; Page 128-130; 152pp; English.
 XX The invention relates to neuropilin-like polypeptide (neuropilin-Hy1 and
 CC neuropilin-Hy2) and their corresponding nucleic acids. The neuropilin-
 CC like polypeptides and polynucleotides are useful in modulating neuronal
 CC growth regenerative capacity, treating neurodegenerative diseases,
 CC diagnosing and mapping genetic neuronal defects and degenerative diseases
 CC like Alzheimer's disease and for treating learning and memory disorders.
 CC They are also useful for inducing angiogenesis, neovascularisation, as
 CC well as organ growth and development e.g. heart and other tissues.
 CC Antagonists of neuropilin-like polypeptides are useful for treating
 CC cancers and other malignant diseases. Neuropilin is used to treat
 CC platelet disorders e.g. thrombocytopenia, plastic anaemia and paroxysmal
 CC nocturnal haemoglobinuria and is used in nerve tissue growth or
 CC regeneration, in wound healing, tissue repair and replacement and in
 CC healing of bones, incisions and ulcers. Compositions comprising the
 CC sequences of the invention are useful for treating diseases of peripheral
 CC nervous system e.g. Parkinson's disease, Huntington's disease, Shy-Drager
 CC syndrome, amyotrophic lateral sclerosis, and traumatic disorders e.g.
 CC spinal cord disorders, head trauma and cerebrovascular diseases e.g.
 CC stroke, ulcers, immune deficiencies and immune disorders, infections by
 CC hepatitis viruses, human immunodeficiency virus (HIV), herpes viruses,
 CC mycobacteria, Leishmania spp., malaria spp., autoimmune disorders e.g.
 CC multiple sclerosis, systemic lupus erythematosus, rheumatoid arthritis,
 CC autoimmune pulmonary inflammation, autoimmune thyroiditis, diabetes
 CC mellitus, graft-versus-host disease, myasthenia gravis and autoimmune
 CC inflammatory eye disease. The nucleic acids of the invention are used in
 CC gene therapy techniques. The present sequence is human neuropilin-Hy2
 CC protein. Neuropilin-Hy2 gene is located on chromosome 6q21.

XX New neuropilin-like polypeptides for diagnosing, preventing and
PT treating neurological conditions and disorders, cancers, and for
PT inducing angiogenesis and neovascularisation.

XX Claim 3; Page 123-125; 144pp; English.

XX The invention relates to an isolated neuropilin-like polypeptide
CC including neuropilin-Hy1 and neuropilin-Hy2, the full length cDNAs
CC encoding the proteins and the coding regions of the cDNAs. Also included
CC is a nucleic acid array comprising the cDNAs attached to a surface used
CC for detecting full-matches or mismatches to the cDNAs. The genes
CC for neuropilin-Hy1 and Hy2 are located on human chromosome 6q21.
CC The nucleic acid array is useful for detecting full-matches or mismatches
CC to the cDNAs. The neuropilin-like proteins and encoding cDNAs are useful
CC in modulating neuronal growth, regenerative capacity, treating
CC neurodegenerative diseases, learning and memory disorders, diagnosing and
CC mapping genetic neuronal defects and degenerative diseases like
CC Alzheimer's disease, for inducing angiogenesis, and neovascularisation
CC and organ growth and development (e.g. the heart). The nervous system
CC disorders include lesions of central or peripheral nervous systems,
CC including traumatic lesions, ischaemic lesions, infectious lesions,
CC degenerative lesions, lesions associated with nutritional diseases or
CC disorders, neurological lesions, and lesions caused by toxic substances.
CC The neuropilin-like proteins and cDNAs are also useful as markers for
CC cancers. The neuropilin-like proteins are useful for regulating cell
CC proliferation, cell differentiation, stem cell growth factor activity,
CC for inducing proliferation of neural cells, regeneration of nerve and
CC brain tissue, for treatment of central and peripheral nervous system
CC diseases, and neuropathies, such as Parkinson's disease,
CC Huntington's disease, amyotrophic lateral sclerosis, to regulate
CC haematopoiesis and treat myeloid and lymphoid cell disorders, various
CC anaemias, and platelet disorders, such as thrombocytopaenia,
CC regeneration and treatment of lung or liver fibrosis, reperfusion
CC injury in various tissues and as a food supplement or molecular
CC weight marker. The cDNAs are useful in gene identification, genome
CC mapping, transgenics, as hybridisation probes, for primer design, for
CC gene chips and as a DNA antigen. The present sequence represents
CC neuropilin-Hy2.

XX New isolated polynucleotide and encoded polypeptides, useful in
XX diagnostics, forensics, gene mapping, identification of mutations
XX responsible for genetic disorders or other traits and to assess
XX biodiversity -
XX Claim 20; SEQ ID NO 31657; 103pp; English.
XX The invention relates to isolated polynucleotide (I) and
XX polypeptide (II) sequences. (I) is useful as hybridisation probes,
XX polymerase chain reaction (PCR) primers, oligomers, and for chromosome
XX and gene mapping, and in recombinant production of (II). The
XX polynucleotides are also used in diagnostics as expressed sequence tags
XX for identifying expressed genes. (I) is useful in gene therapy techniques
XX to restore normal activity of (II) or to treat disease states involving
XX (II). (II) is useful for generating antibodies against it, detecting or
XX quantitating a polypeptide in tissue, as molecular weight markers and as
XX a food supplement. (II) and its binding partners are useful in medical
XX imaging of sites expressing (II). (I) and (II) are useful for treating
XX disorders involving aberrant protein expression or biological activity.
XX The polypeptide and polynucleotide sequences have applications in
XX diagnostics, forensics, gene mapping, identification of mutations
XX responsible for genetic disorders or other traits to assess biodiversity
XX and to produce other types of data and products dependent on DNA and
XX amino acid sequences. ABG00010-ABG0377 represent novel human
XX diagnostic amino acid sequences of the invention.

XX Human genome-derived single exon nucleic acid probes useful for
XX PT analyzing gene expression in human bone marrow -
XX PS Example 4; SEQ ID NO: 36219; 658pp + Sequence Listing; English.
XX CC The present invention provides a number of single exon nucleic acid
XX CC probes which are derived from genomic sequences expressed in the human
XX CC bone marrow. They can be used to measure gene expression in bone marrow
XX CC samples, which may enable the improved diagnosis and treatment of cancers
XX CC such as lymphoma, leukaemia and myeloma. The present sequence is a
XX CC protein encoded by one of the probes of the invention.

XX Human genome-derived single exon nucleic acid probes useful for
XX PT analyzing gene expression in human placenta -
```

XX Claim 27; SEQ ID No 36293; 654pp; English.

XX The present invention relates to single exon nucleic acid probes (SENP: see AAI1315-AAI57546). The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders.

XX Spatially-addressable set of single exon nucleic acid probes, used to measure gene expression in human lung samples -
XX Claim 27; SEQ ID No 35014; 634pp; English.
XX The invention relates to a spatially-addressable set of single exon

CC nucleic acid probes for measuring gene expression in a sample derived from human lung comprising single exon nucleic acid probes having one of 12614 nucleic acid sequences mentioned in the specification or their complements or the 12387 open reading frames derived from the 12614 probes. Also included are a microarray comprising the novel set of probes; the novel set of probes which hybridise at high stringency to a nucleic acid expressed in the human lung; measuring gene expression in a sample derived from human lung, comprising (a) contacting the array with a collection of detectably labeled nucleic acids derived from human lung mRNA, and (b) measuring the label detectably bound to each probe of the array; identifying exons in a eukaryotic genome, comprising (a) algorithmically predicting at least one exon from genomic sequences of the eukaryote; and (b) detecting specific hybridisation of detectably labeled nucleic acids from eukaryote lung mRNA, to a single exon probe, having a fragment identical to the predicted exon, the probe is included in the above mentioned microarray; assigning exons to a single gene, comprising (a) identifying exons from genomic sequence by the method above and (b) measuring the expression of each of the exons in several tissues and/or cell types using hybridisation to a single exon microarray having a probe with the exon, where a common pattern of expression of the exons in the tissues and/or cell types indicates that the exons should be assigned to a single gene; a peptide comprising one of 12011 sequences, mentioned in the specification, or encoded by the probes/open reading frames (ORF). The probes are used for gene expression analysis, and for identifying exons in a gene, particularly using human lung derived mRNA and for the study of lung diseases such as asthma, lung cancer, chronic obstructive pulmonary disease (COPD), interstitial lung disease (ILD), familial idiopathic pulmonary fibrosis, neurofibromatosis, tuberculous sclerosis, Gaucher's disease, Niemann-Pick disease, Hermansky-Pudlak syndrome, sarcoidosis, pulmonary haemosiderosis, pulmonary histiocytosis, lymphangioleiomyomatosis, pulmonary alveolar proteinosis, Karagener syndrome, fibrocystic pulmonary dysplasia, primary ciliary dyskinesia, pulmonary hypertension and hyaline membrane disease. The present sequence is a peptide/protein encoded by a single exon probe of the invention.

CC Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
ftp.wipo.int/pub/published_pct_sequences.

XX DR Novel isolated human Neuropilin-Hy1 and Neuropilin-Hy2 polypeptides
XX PT useful for treating neurodegenerative diseases e.g. Alzheimer's
XX PT disease, and for diagnosing and mapping genetic neuronal defects
XX PS Disclosure; Page 130-131; 152pp; English.
XX CC The invention relates to neuropilin-like polypeptide (neuropilin-Hy1 and
XX CC neuropilin-Hy2) and their corresponding nucleic acids. The neuropilin-
XX CC like polypeptides and polynucleotides are useful in modulating neuronal
XX CC growth regenerative capacity, treating neurodegenerative diseases,
XX CC diagnosing and mapping genetic neuronal defects and degenerative diseases
XX CC like Alzheimer's disease and for treating learning and memory disorders.
XX CC They are also useful for inducing angiogenesis, neovascularisation, as
XX CC well as organ growth and development e.g. heart and other tissues.
XX CC Antagonists of neuropilin-like polypeptides are useful for treating
XX CC cancers and other malignant diseases. Neuropilin is used to treat
XX CC platelet disorders e.g. thrombocytopenia, plastic anaemia and paroxysmal
XX CC nocturnal haemoglobinuria and is used in nerve tissue growth or
XX CC regeneration, in wound healing, tissue repair and replacement and in
XX CC healing of bones, incisions and ulcers. Compositions comprising the
XX CC sequences of the invention are useful for treating diseases of peripheral
XX CC nervous system e.g. Parkinson's disease, Huntington's disease, Shy-Drager
XX CC syndrome, amyotrophic lateral sclerosis, and traumatic disorders e.g.
XX CC spinal cord disorders, head trauma and cerebrovascular diseases e.g.
XX CC stroke, ulcers, immune deficiencies and immune disorders, infections by
XX CC hepatitis viruses, human immunodeficiency virus (HIV), herpes viruses,
XX CC mycobacteria, Leishmania spp., malaria spp., autoimmune disorders e.g.
XX CC multiple sclerosis, systemic lupus erythematosus, rheumatoid arthritis,
XX CC autoimmune pulmonary inflammation, autoimmune thyroiditis, diabetes
XX CC mellitus, graft-versus-host disease, myasthenia gravis and autoimmune
XX CC inflammatory eye disease. The nucleic acids of the invention are used in
XX CC gene therapy techniques. The present sequence is human neuropilin-Hy2
XX CC signal peptide.

XX PT Screening for susceptibility to systemic autoimmune disorder by
XX PT screening for a mutation within the systemic lupus erythematosus-1B
XX PT loci
XX PS Disclosure; Page 115-117; 128pp; English.
XX CC The present invention relates to a new method for screening for
XX CC susceptibility to a systemic autoimmune disorder. The method comprises
XX CC screening for at least one mutation within the systemic lupus
XX CC erythematosus (SLE)-1B loci. Screening for susceptibility to autoimmune
XX CC disorders such as systemic lupus erythematosus involves screening for at
XX CC least one mutation in a gene or genes with the SLE-1B loci such as a gene
XX CC encoding signalling lymphocyte activation molecule (SLAM), lymphocyte
XX CC antigen (Ly)-9, 2B4 (a natural killer cell receptor), CD48, CD84, LY108,
XX CC CS1, DEDD, NIT1, upstream transcription factor (USF)1, GOLGA4. The method
XX CC of the invention is useful for treating SLE and involves administering
XX CC a construct comprising a wild-type sequence encoding any one of the
XX CC above mentioned genes. Gene therapy also involves the use of antisense
XX CC constructs or ribozymes directed against the above mentioned genes for
XX CC treating SLE.
XX CC Note: The present protein sequence represents a mouse protein of the
XX CC invention that relates to the isolation of genes within SLE-1B that
XX CC mediate a break in immune tolerance. This sequence is shown in the
XX CC sequence listing but is not further defined in the specification.

XX Factor 8 homolog polypeptides and nucleic acids encoding them for

XX treating coagulation related disorders such as hemophilia and stroke

XX Claim 3; Page 64-66; 68pp; English.

XX The present sequence is a human Factor 8 homologue (F8H),

XX a coagulation cofactor which is selectively expressed in

CC haematopoietic, heart and reproductive tissues. It has haemostatic and

CC cerebroprotective activities. The F8H contains a Factor 5/8 signature

CC and is useful as a therapeutic for treating coagulation related diseases

CC such as haemophilia and stroke. The nucleic acid is useful as

CC hybridisation probe and amplification primer for detecting deficiencies

CC in the level of F8H mRNA, for screening F8H gene mutations and for

CC monitoring regulation of gene expression. Fragments of the nucleic acid

CC are also useful as diagnostic probes and primers, and can be used in

CC screening methods such as those using DNA chips. The present sequence is

CC also useful as a target to screen therapeutically useful modulators

CC of the F8H.

DR Nucleic acids encoding 4277 human colon cancer-associated polypeptides,

XX useful for preventing, diagnosing and/or treating colorectal cancers -

PS Claim 11; Page 7657-7660; 9803pp; English.

XX AAH32943 to AAH37195 and AAG73514 to AAG77788 represent human colon

CC cancer-associated nucleic acid molecules (N) and proteins (P), where

CC the proteins are collectively known as colon cancer antigens. The colon

CC cancer antigens have cytostatic activity and can be used in gene

CC therapy and vaccine production. N and P may be used in the prevention,

CC diagnosis and treatment of diseases associated with inappropriate P

CC expression. For example, N and P may be used to treat disorders

CC associated with decreased expression by rectifying mutations or deletions

CC in a patient's genome that affect the activity of P by expressing

CC inactive proteins or to supplement the patients own production of P.

CC Additionally, N may be used to produce the colon cancer-associated Ps,

CC by inserting the nucleic acids into a host cell and culturing the cell

CC to express the proteins. N and P can be used in the prevention, diagnosis

CC and treatment of colorectal carcinomas and cancers. AAH37196 to AAH37204

CC and AAG77789 represent sequences used in the exemplification of the

CC present invention.

CC N.B. Pages 666 to 682 and page 7053 of the sequence listing were

PT New isolated polynucleotide and encoded polypeptides, useful in
PT diagnostics, forensics, gene mapping, identification of mutations
PT responsible for genetic disorders or other traits and to assess
PT biodiversity -
XX
PS Claim 20; SEQ ID No 31657; 103pp; English.
XX
CC The invention relates to isolated polynucleotide (I) and
CC polypeptide (II) sequences. (I) is useful as hybridisation probes,
CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome
CC and gene mapping, and in recombinant production of (II). The
CC polynucleotides are also used in diagnostics as expressed sequence tags
CC for identifying expressed genes. (I) is useful in gene therapy techniques
CC to restore normal activity of (II) or to treat disease states involving
CC (II). (II) is useful for generating antibodies against it, detecting or
CC quantitating a polypeptide in tissue, as molecular weight markers and as
CC a food supplement. (II) and its binding partners are useful in medical
CC imaging of sites expressing (II). (I) and (II) are useful for treating
CC disorders involving aberrant protein expression or biological activity.
CC The polypeptide and polynucleotide sequences have applications in
CC diagnostics, forensics, gene mapping, identification of mutations
CC responsible for genetic disorders or other traits to assess biodiversity
CC and to produce other types of data and products dependent on DNA and
CC amino acid sequences. ABG0010-ABG30377 represent novel human
CC diagnostic amino acid sequences of the invention.

CC Note: The sequence data for this patent did not appear in the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/published_pct_sequences.

PT Novel isolated human Neuropilin-Hy1 and Neuropilin-Hy2 polypeptides
PT useful for treating neurodegenerative diseases e.g. Alzheimer's
PT disease, and for diagnosing and mapping genetic neuronal defects -
XX

PS Disclosure; Page 131-132; 152pp; English.

XX The invention relates to neuropilin-like polypeptide (neuropilin-Hy1 and
CC neuropilin-Hy2) and their corresponding nucleic acids. The neuropilin-
CC like polypeptides and polynucleotides are useful in modulating neuronal
CC growth regenerative capacity, treating neurodegenerative diseases,
CC diagnosing and mapping genetic neuronal defects and degenerative diseases
CC like Alzheimer's disease and for treating learning and memory disorders.
CC They are also useful for inducing angiogenesis, neovascularisation, as
CC well as organ growth and development e.g. heart and other tissues.
CC Antagonists of neuropilin-like polypeptides are useful for treating
CC cancers and other malignant diseases. Neuropilin is used to treat
CC platelet disorders e.g. thrombocytopenia, plastic anaemia and paroxysmal
CC nocturnal haemoglobinuria and is used in nerve tissue growth or
CC regeneration, in wound healing, tissue repair and replacement and in
CC healing of bones, incisions and ulcers. Compositions comprising the
CC sequences of the invention are useful for treating diseases of peripheral
CC nervous system e.g. Parkinson's disease, Huntington's disease, Shy-Drager
CC syndrome, amyotrophic lateral sclerosis, and traumatic disorders e.g.
CC spinal cord disorders, head trauma and cerebrovascular diseases e.g.
CC stroke, ulcers, immune deficiencies and immune disorders, infections by
CC hepatitis viruses, human immunodeficiency virus (HIV), herpes viruses,
CC mycobacteria, Leishmania spp., malaria spp., autoimmune disorders e.g.
CC multiple sclerosis, systemic lupus erythematosus, rheumatoid arthritis,
CC autoimmune pulmonary inflammation, autoimmune thyroiditis, diabetes
CC mellitus, graft-versus-host disease, myasthenia gravis and autoimmune
CC inflammatory eye disease. The nucleic acids of the invention are used in
CC gene therapy techniques. The present sequence is human neuropilin-Hy2
CC mature protein.

XX New neuropilin-like polypeptides for diagnosing, preventing and
PT treating neurological conditions and disorders, cancers, and for
PT inducing angiogenesis and neovascularisation.
XX
XX Claim 3; Page 123-125; 144pp; English.

The invention relates to an isolated neuropilin-like polypeptide
CC including neuropilin-Hy1 and neuropilin-Hy2, the full length cDNAs
CC encoding the proteins and the coding regions of the cDNAs. Also included
CC is a nucleic acid array comprising the cDNAs attached to a surface used
CC for detecting full-matches or mismatches to the cDNAs. The genes
CC for neuropilin-Hy1 and Hy2 are located on human chromosome 6q21.
CC The nucleic acid array is useful for detecting full-matches or mismatches
CC to the cDNAs. The neuropilin-like proteins and encoding cDNAs are useful
CC in modulating neuronal growth, regenerative capacity, treating
CC neurodegenerative diseases, learning and memory disorders, diagnosing and
CC mapping genetic neuronal defects and degenerative diseases like
CC Alzheimer's disease, for inducing angiogenesis, and neovascularisation
CC and organ growth and development (e.g. the heart). The nervous system
CC disorders include lesions of central or peripheral nervous systems,
CC including traumatic lesions, ischaemic lesions, infectious lesions,
CC degenerative lesions, lesions associated with nutritional diseases or
CC disorders, neurological lesions, and lesions caused by toxic substances.
CC The neuropilin-like proteins and cDNAs are also useful as markers for

CC cancers. The neuropilin-like proteins are useful for regulating cell
CC proliferation, cell differentiation, stem cell growth factor activity,
CC for inducing proliferation of neural cells, regeneration of nerve and
CC brain tissue, for treatment of central and peripheral nervous system
CC diseases, and neuropathies, such as Parkinson's disease,
CC Huntington's disease, amyotrophic lateral sclerosis, to regulate
CC haematopoiesis and treat myeloid and lymphoid cell disorders, various
CC anaemias, and platelet disorders, such as thrombocytopaenia,
CC regeneration and treatment of lung or liver fibrosis, reperfusion
CC injury in various tissues and as a food supplement or molecular
CC weight marker. The cDNAs are useful in gene identification, genome
CC mapping, transgenics, as hybridisation probes, for primer design, for
CC gene chips and as a DNA antigen. The present sequence represents
CC neuropilin-Hy2.

XX
XX An isolated polynucleotide for treating diseases associated with its
PT encoded polypeptide such as cancer and multiple sclerosis.
XX
XX Claim 20; SEQ ID NO 654; 509pp; English.
XX
XX The present invention provides the protein and coding sequences of 444

CC novel human proteins. These were isolated from expressed sequences tags
 CC (ESTs). They can be used to stimulate cell growth, to regulate
 CC haematopoiesis e.g. to treat aplastic anaemia, to help tissue regrowth
 CC e.g. in burn treatment, to regulate the immune system e.g. to treat
 CC multiple sclerosis, to regulate activin or inhibin e.g. to treat
 CC infertility, to regulate haemostasis or thrombolysis e.g. to treat
 CC stroke and cancer, to screen for drugs, to treat inflammatory conditions
 CC e.g. rheumatoid arthritis, and to treat nervous system disorders e.g.
 CC Parkinson's disease. The present sequence is a protein of the invention.

 XX Novel isolated human Neuropilin-Hy1 and Neuropilin-Hy2 polypeptides
 PT useful for treating neurodegenerative diseases e.g. Alzheimer's

PT disease, and for diagnosing and mapping genetic neuronal defects
 XX
 XX Disclosure: Page 130-131; 152pp; English.
 XX
 CC The invention relates to neuropilin-like polypeptide (neuropilin-Hy1 and
 CC neuropilin-Hy2) and their corresponding nucleic acids. The neuropilin-
 CC like polypeptides and polynucleotides are useful in modulating neuronal
 CC growth regenerative capacity, treating neurodegenerative diseases,
 CC diagnosing and mapping genetic neuronal defects and degenerative diseases
 CC like Alzheimer's disease and for treating learning and memory disorders.
 CC They are also useful for inducing angiogenesis, neovascularisation, as
 CC well as organ growth and development e.g. heart and other tissues.
 CC antagonists of neuropilin-like polypeptides are useful for treating
 CC cancers and other malignant diseases. Neuropilin is used to treat
 CC platelet disorders e.g. thrombocytopaenia, plastic anaemia and paroxysmal
 CC nocturnal haemoglobinuria and is used in nerve tissue growth or
 CC regeneration, in wound healing, tissue repair and replacement and in
 CC healing of bones, incisions and ulcers. Compositions comprising the
 CC sequences of the invention are useful for treating diseases of peripheral
 CC nervous system e.g. Parkinson's disease, Huntington's disease, Shy-Drager
 CC syndrome, amyotrophic lateral sclerosis, and traumatic disorders e.g.
 CC spinal cord disorders, head trauma and cerebrovascular diseases e.g.
 CC stroke, ulcers, immune deficiencies and immune disorders, infections by
 CC hepatitis viruses, human immunodeficiency virus (HIV), herpes viruses,
 CC mycobacteria, Leishmania spp., malaria spp., autoimmune disorders e.g.
 CC multiple sclerosis, systemic lupus erythematosus, rheumatoid arthritis,
 CC autoimmune pulmonary inflammation, autoimmune thyroiditis, diabetes
 CC mellitus, graft-versus-host disease, myasthenia gravis and autoimmune
 CC inflammatory eye disease. The nucleic acids of the invention are used in
 CC gene therapy techniques. The present sequence is human neuropilin-Hy2
 CC signal peptide.

 PT Screening for susceptibility to systemic autoimmune disorder by
 PT screening for a mutation within the systemic lupus erythematosus-1B
 PT loci
 XX
 PS Disclosure: Page 115-117; 128pp; English.
 XX
 CC The present invention relates to a new method for screening for
 CC susceptibility to a systemic autoimmune disorder. The method comprises
 CC screening for at least one mutation within the systemic lupus
 CC erythematosus (SLE)-1B loci. Screening for susceptibility to autoimmune
 CC disorders such as systemic lupus erythematosus involves screening for at
 CC least one mutation in a gene or genes with the SLE-1B loci such as a gene
 CC encoding signalling lymphocyte activation molecule (SLAM), lymphocyte
 CC antigen (Ly)-9, 2B4 (a natural killer cell receptor), CD48, CD84, LY108,
 CC CS1, DEDD, NTR1, upstream transcription factor (USF)1, GOLGA4. The method
 CC of the invention is useful for treating SLE and involves administering
 CC a construct comprising a wild-type sequence encoding any one of the
 CC above mentioned genes. Gene therapy also involves the use of antisense
 CC constructs or ribozymes directed against the above mentioned genes for
 CC treating SLE.
 CC Note: The present protein sequence represents a mouse protein of the
 CC invention that relates to the isolation of genes within SLE-1B that
 CC mediate a break in immune tolerance. This sequence is shown in the
 CC sequence listing but is not further defined in the specification.

 XX
 CC The present sequence represents human beta galactosidase and is used as
 CC a marker in the retroviral vector of the invention. The specification
 CC describes a gene delivery vehicle which directs expression of a
 CC non-immunogenic selectable marker or molecule which is capable of
 CC activating a previously inactive compound. Vectors expressing the
 CC markers can be used to deliver a molecule into a target area where it
 CC may cause the activation of a previously inactive substance.

 XX

CC AAD34068-AAD34096 represent cDNAs corresponding to 11 human secreted
 CC protein genes, and AAEE21629-AAEE21657 represent the proteins they encode.
 CC AAEE21658-AAEE21663 represent human secreted protein fragments. The genes
 CC and their corresponding secreted proteins are useful for preventing,
 CC treating or ameliorating medical conditions, e.g., by protein or gene
 CC therapy. Pathological conditions can be diagnosed by determining the
 CC amount of the new protein in a sample or by determining the presence of
 CC mutations in the new genes. Specific uses are described for each of the
 CC 11 genes, based on the tissues in which they are most highly expressed.
 CC Sequences of the invention are useful in treating, preventing, diagnosing
 CC and/or prognosing immunodeficiencies, inflammatory conditions (e.g.,
 CC septic shock, reperfusion injury, inflammatory bowel disease), autoimmune
 CC disorders (e.g., rheumatoid arthritis), gastrointestinal disorders,
 CC respiratory disorders (e.g., asthma and allergy), cancers (e.g. liver
 CC and breast), central nervous system (CNS) disorders (e.g., multiple
 CC sclerosis), cardiovascular disorders (e.g., atherosclerosis), neuro-
 CC degenerative disorders (e.g., Parkinson's disease, Alzheimer's disease,
 CC AIDS-related dementia, prion disease) and many additional diseases,
 CC conditions and disorders that are characterised by inflammation (e.g.,
 CC hepatitis). They are also useful for treating blood-related disorder
 CC (e.g., thrombosis), hyperproliferative disorders, renal disorders (e.g.,
 CC acute glomerulonephritis), endocrine disorders (e.g., Addison's disease),
 CC reproductive system disorders (e.g., endometriosis), infectious diseases
 CC and pancreatic disorders. They are also useful as vaccine adjuvants that
 CC enhance immune responsiveness to an antigen and as adjuvants to enhance
 CC tumour-specific immune responses, anti-viral, anti-bacterial, anti-fungal
 CC and anti-parasitic immune responses. Secreted proteins of the invention
 CC are used for enhancing or inhibiting complement mediated cell lysis, for
 CC stimulating wound and tissue repair, angiogenesis and the repair of
 CC vascular or lymphatic diseases or disorders. They stimulate neuronal
 CC growth and are used to treat, prevent and/or diagnose neuronal damage,
 CC to prevent hair loss, to stimulate keratinocyte growth, to modulate
 CC mammalian characteristics such as body height, weight, hair colour and
 CC to increase or decrease storage capabilities, fat content, lipid,
 CC protein, vitamins, carbohydrate, minerals, cofactors or other nutritional
 CC components. Sequences of the invention are also useful in gene therapy.
 CC The present sequence represents a human secreted protein of the
 CC invention.

PT diagnostic methods, to direct secretion of other proteins of interest
PT from host cell, as educational tools, and as laboratory practicum kits
PT
XX
XX Claim 12: Page 294; 397pp; English.
XX The invention describes an isolated mammalian secreted polypeptide (MSP)
CC (1). (1) is useful to direct the secretion of other proteins of interest
CC from a host cell, to monitor secretion of proteins, to degenerate
CC sequences comprising all nucleotide sequences encoding a particular
CC polypeptide, to screen for cell metabolism effecting receptors, for
CC identifying new target receptors and drug design, for identifying, for
CC protein purification, for determining the weight of expressed MSP,
CC polypeptides as a ratio to total protein expressed, for identifying
CC peptide cleavage sites, for coupling amino and carboxy terminal tags, for
CC amino acid sequence analysis, for monitoring biological activities of the
CC protein in vitro and in vivo, and to teach analytical skills and as
CC reagents for the study of cells, receptors, and other binding molecules.
CC The polynucleotide is useful for radiation hybrid mapping, and somatic
CC cell genetic technique developed for constructing high-resolution,
CC contiguous maps of mammalian chromosomes. Reagents disclosed in the
CC invention may be used to detect metabolic abnormalities characterised by
CC over or under production of the protein. This is the amino acid sequence
CC of a mammalian secreted polypeptide, described in the method of the
CC invention.

 XX Factor 8 homolog polypeptides and nucleic acids encoding them for
 XX treating coagulation related disorders such as hemophilia and stroke
 XX Claim 3; Page 64-66; 68pp; English.
 CC The present sequence is a human Factor 8 homologue (F8H),
 CC a coagulation cofactor which is selectively expressed in
 CC haematopoietic, heart and reproductive tissues. It has haemostatic and
 CC cerebroprotective activities. The F8H contains a factor 5/8 signature
 CC and is useful as a therapeutic for treating coagulation related diseases
 CC such as haemophilia and stroke. The nucleic acid is useful as
 CC hybridisation probe and amplification primer for detecting deficiencies
 CC in the level of F8H mRNA, for screening F8H gene mutations and for
 CC monitoring regulation of gene expression. Fragments of the nucleic acid
 CC are also useful as diagnostic probes and primers, and can be used in
 CC screening methods such as those using DNA chips. The present sequence is
 CC also useful as a target to screen therapeutically useful modulators
 CC of the F8H.

XX
XX Novel isolated human Neuropilin-Hy1 and Neuropilin-Hy2 polypeptides
XX useful for treating neurodegenerative diseases e.g. Alzheimer's
XX disease, and for diagnosing and mapping genetic neuronal defects -
PS Claim 3; Page 138-130; 152pp; English.
XX
XX The invention relates to neuropilin-like polypeptide (neuropilin-Hy1 and
XX neuropilin-Hy2) and their corresponding nucleic acids. The neuropilin-
XX like polypeptides and polynucleotides are useful in modulating neuronal
XX growth regenerative capacity, treating neurodegenerative diseases,
XX diagnosing and mapping genetic neuronal defects and degenerative diseases
XX like Alzheimer's disease and for treating learning and memory disorders.
XX They are also useful for inducing angiogenesis, neovascularisation, as
XX well as organ growth and development e.g. heart and other tissues.
XX Antagonists of neuropilin-like polypeptides are useful for treating
XX cancers and other malignant diseases. Neuropilin is used to treat
XX platelet disorders e.g. thrombocytopaenia, plastic anaemia and paroxysmal
XX nocturnal haemoglobinuria and is used in nerve tissue growth or
XX regeneration, in wound healing, tissue repair and replacement and in
XX healing of bones, incisions and ulcers. Compositions comprising the
XX sequences of the invention are useful for treating diseases of peripheral
XX nervous system e.g. Parkinson's disease, Huntington's disease, Shy-Drager
XX syndrome, amyotrophic lateral sclerosis, and traumatic disorders e.g.
XX spinal cord disorders, head trauma and cerebrovascular diseases e.g.
XX stroke, ulcers, immune deficiencies and immune disorders, infections by
XX hepatitis viruses, human immunodeficiency virus (HIV), herpes viruses,
XX mycobacteria, Leishmania spp., malaria spp., autoimmune disorders e.g.
XX multiple sclerosis, systemic lupus erythematosus, rheumatoid arthritis,
XX autoimmune pulmonary inflammation, autoimmune thyroiditis, diabetes
XX mellitus, graft-versus-host disease, myasthenia gravis and autoimmune
XX inflammatory eye diseases. The nucleic acids of the invention are used in
XX gene therapy techniques. The present sequence is human neuropilin-Hy2
XX protein. Neuropilin-Hy2 gene is located on chromosome 6q21.

XX Factor 8 homolog polypeptides and nucleic acids encoding them for

PT treating coagulation related disorders such as hemophilia and stroke

xx PS Claim 3; Page 64-66; 68pp; English.

xx CC The present sequence is a human Factor 8 homologue (F8H),

xx CC a coagulation cofactor which is selectively expressed in

xx CC haematopoietic, heart and reproductive tissues. It has haemostatic and

xx CC cerebroprotective activities. The F8H contains a Factor 5/8 signature

xx CC and is useful as a therapeutic for treating coagulation related diseases

xx CC such as haemophilia and stroke. The nucleic acid is useful as

xx CC hybridisation probe and amplification primer for detecting deficiencies

xx CC in the level of F8H mRNA, for screening F8H gene mutations and for

xx CC monitoring regulation of gene expression. Fragments of the nucleic acid

xx CC are also useful as diagnostic probes and primers, and can be used in

xx CC screening methods such as those using DNA chips. The present sequence is

xx CC also useful as a target to screen therapeutically useful modulators

xx CC of the F8H.

xx PT Nucleic acids encoding 4277 human colon cancer-associated polypeptides, useful for preventing, diagnosing and/or treating colorectal cancers -

xx PS Claim 11; Page 7657-7660; 9803pp; English.

xx AAH32943 to AAH37195 and AAG77788 represent human colon cancer-associated nucleic acid molecules (N) and proteins (P), where the proteins are collectively known as colon cancer antigens. The colon cancer antigens have cytostatic activity and can be used in gene therapy and vaccine production. N and P may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate P expression. For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expressing inactive proteins or to supplement the patients own production of P. Additionally, N may be used to produce the colon cancer-associated Ps, by inserting the nucleic acids into a host cell and culturing the cell to express the proteins. N and P can be used in the prevention, diagnosis and treatment of colorectal carcinomas and cancers. AAH37196 to AAH37204 and AAG77789 represent sequences used in the exemplification of the present invention.

xx CC N.B. Pages 666 to 682 and page 7053 of the sequence listing were missing at time of publication, meaning no sequences are present for CC SEQ ID NO:1027 to 1052, 7921 and 7922.

XX Novel isolated human Neuropilin-Hy1 and Neuropilin-Hy2 polypeptides
PT useful for treating neurodegenerative diseases e.g. Alzheimer's
PT disease, and for diagnosing and mapping genetic neuronal defects
XX
PS Claim 3; Page 128-130; 152pp; English.
XX
CC The invention relates to neuropilin-like polypeptide (neuropilin-Hy1 and
CC neuropilin-Hy2) and their corresponding nucleic acids. The neuropilin-
CC like polypeptides and polynucleotides are useful in modulating neuronal
CC growth regenerative capacity, treating neurodegenerative diseases,
CC diagnosing and mapping genetic neuronal defects and degenerative diseases
CC like Alzheimer's disease and for treating learning and memory disorders.
CC They are also useful for inducing angiogenesis, neovascularisation, as
CC well as organ growth and development e.g. heart and other tissues.
CC Antagonists of neuropilin-like polypeptides are useful for treating
CC cancers and other malignant diseases. Neuropilin is used to treat
CC platelet disorders e.g. thrombocytopaenia, plastic anaemia and paroxysmal
CC nocturnal haemoglobinuria and is used in nerve tissue growth or
CC regeneration, in wound healing, tissue repair and replacement and in
CC healing of bones, incisions and ulcers. Compositions comprising the
CC sequences of the invention are useful for treating diseases of peripheral
CC nervous system e.g. Parkinson's disease, Huntington's disease, Shy-Drager
CC syndrome, amyotrophic lateral sclerosis, and traumatic disorders e.g.
CC spinal cord disorders, head trauma and cerebrovascular diseases e.g.
CC stroke, ulcers, immune deficiencies and immune disorders, infections by
CC hepatitis viruses, human immunodeficiency virus (HIV), herpes viruses,
CC mycobacteria, Leishmania spp., malaria spp., autoimmune disorders e.g.
CC multiple sclerosis, systemic lupus erythematosus, rheumatoid arthritis,
CC autoimmune pulmonary inflammation, autoimmune thyroiditis, diabetes
CC mellitus, graft-versus-host disease, myasthenia gravis and autoimmune
CC inflammatory eye disease. The nucleic acids of the invention are used in
CC gene therapy techniques. The present sequence is human neuropilin-Hy2
CC protein. Neuropilin-Hy2 gene is located on chromosome 6q21.

XX An isolated polynucleotide for treating diseases associated with its

PT encoded polypeptide such as cancer and multiple sclerosis -

XX

PS Claim 20; SEQ ID NO 654; 509pp; English.

XX

CC The present invention provides the protein and coding sequences of 444

CC novel human proteins. These were isolated from expressed sequences tags

CC (ESTs). They can be used to stimulate cell growth, to regulate

CC haematopoiesis e.g. to treat aplastic anaemia, to help tissue regrowth

CC e.g. in burn treatment, to regulate the immune system e.g. to treat

CC multiple sclerosis, to regulate activin or inhibin e.g. to treat

CC infertility, to regulate haemostasis or thrombolysis e.g. to treat

CC stroke and cancer, to screen for drugs, to treat inflammatory conditions

CC e.g. rheumatoid arthritis, and to treat nervous system disorders e.g.

CC Parkinson's disease. The present sequence is a protein of the invention.

PT Novel isolated human Neuropilin-Hy1 and Neuropilin-Hy2 polypeptides

PT useful for treating neurodegenerative diseases e.g. Alzheimer's

PT disease, and for diagnosing and mapping genetic neuronal defects -

PS

PS Disclosure; Page 131-132; 152pp; English.

XX

CC The invention relates to neuropilin-like polypeptide (neuropilin-Hy1 and

CC neuropilin-Hy2) and their corresponding nucleic acids. The neuropilin-

CC like polypeptides and polynucleotides are useful in modulating neuronal

CC growth regenerative capacity, treating neurodegenerative diseases,

CC diagnosing and mapping genetic neuronal defects and degenerative diseases

CC like Alzheimer's disease and for treating learning and memory disorders.

CC They are also useful for inducing angiogenesis, neovascularisation, as

CC well as organ growth and development e.g. heart and other tissues.

CC Antagonists of neuropilin-like polypeptides are useful for treating

CC cancers and other malignant diseases. Neuropilin is used to treat

CC platelet disorders e.g. thrombocytopenia, plastic anaemia and paroxysmal

CC nocturnal haemoglobinuria and is used in nerve tissue growth or

CC regeneration, in wound healing, tissue repair and replacement and in

CC healing of bones, incisions and ulcers. Compositions comprising the

CC sequences of the invention are useful for treating diseases of peripheral

CC nervous system e.g. Parkinson's disease, Huntington's disease, Shy-Drager

CC syndrome, amyotrophic lateral sclerosis, and traumatic disorders e.g.

CC spinal cord disorders, head trauma and cerebrovascular diseases e.g.

CC stroke, ulcers, immune deficiencies and immune disorders, infections by

CC hepatitis viruses, human immunodeficiency virus (HIV), herpes viruses,

CC mycobacteria, Leishmania spp., malaria spp., autoimmune disorders e.g.

CC multiple sclerosis, systemic lupus erythematosus, rheumatoid arthritis,

CC autoimmune pulmonary inflammation, autoimmune thyroiditis, diabetes

CC mellitus, graft-versus-host disease, myasthenia gravis and autoimmune

CC inflammatory eye disease. The nucleic acids of the invention are used in

CC gene therapy techniques. The present sequence is human neuropilin-Hy2

CC mature protein.

 XX New isolated nucleic acid molecule for diagnosis, prevention, and therapy of human and other animal disorder, or as modulating agent for regulating cellular processes
 PS Claim 8; Fig 1; 263pp; English.
 CC The sequence represents human TANGO 229 polypeptide. This protein and

CC similar others exhibit the ability to affect growth, proliferation, survival, differentiation, activity, morphology, or movement/migration of, e.g., T cells and cells of the heart, liver, pancreas, placenta, brain, lung, skeletal muscle, kidney, spleen, lymph node, peripheral blood leukocyte, bone marrow or thymus tissue. They can be used as modulating agents for regulating cellular processes, thus, the proteins and their associated nucleic acids can be used to prognosticate, prevent, diagnose, or treat disorders associated with physiological processes. These disorders include abnormal blood coagulation, asthma, anaphylaxis, hepatitis, multiple sclerosis, cancer, coronary artery disease, malaria, atopic dermatitis, amyotrophic lateral sclerosis, meningitis, attention deficit disorder, Crohn's disease, gastroenteritis, goitre, hypoglycaemia, diabetes mellitus, endometriosis, pulmonary embolism and muscular dystrophy. Antibodies to disorders such as these can be made by providing a polypeptide of the invention to an immuno-competent vertebrate and harvesting blood or serum from the vertebrate.

DR New isolated polynucleotide and encoded polypeptides, useful in

XX diagnostics, forensics, gene mapping, identification of mutations

PT responsible for genetic disorders or other traits and to assess

PT biodiversity

XX Claim 20; SEQ ID NO 31657; 103pp; English.

PS The invention relates to isolated polynucleotide (I) and

XX polypeptide (II) sequences. (I) is useful as hybridisation probes,

CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome

CC and gene mapping, and in recombinant production of (II). The

CC polynucleotides are also used in diagnostics as expressed sequence tags

CC for identifying expressed genes. (I) is useful in gene therapy techniques

CC to restore normal activity of (II) or to treat disease states involving

CC (II). (II) is useful for generating antibodies against it, detecting or

CC quantitating a polypeptide in tissue, as molecular weight markers and as

CC a food supplement. (II) and its binding partners are useful in medical

CC imaging of sites expressing (II). (I) and (II) are useful for treating

CC disorders involving aberrant protein expression or biological activity.

CC The polypeptide and polynucleotide sequences have applications in

CC diagnostics, forensics, gene mapping, identification of mutations

CC responsible for genetic disorders or other traits to assess biodiversity

CC and to produce other types of data and products dependent on DNA and

CC amino acid sequences. ABG00010-ABG30377 represent novel human

CC diagnostic amino acid sequences of the invention.

CC Note: The sequence data for this patent did not appear in the printed

CC specification, but was obtained in electronic format directly from WIPO

CC at ftp.wipo.int/pub/published_pct_sequences.

DR Novel nucleic acid encoding human CUB-domain containing protein, useful

CC for drug screening, diagnosis and treatment of physiological disorders

CC or diseases

XX Claim 5; Page 29-30; 33pp; English.

PS The sequence represents a novel human protein (NHP) containing a CUB

CC domain (an extracellular domain). CUB proteins have been associated with

CC regulating development, modulating cellular processes and preventing

CC infectious disease. NHP nucleotide sequences are useful for gene therapy

CC of physiological disorders or diseases. NHP oligonucleotides are useful

CC as hybridisation probes for screening libraries and assessing gene

CC patterns. NHP nucleotide sequences are useful for detecting mutant or

CC inappropriately expressed NHPs (for example, those proteins associated

CC with obesity, high blood pressure, connective tissue disorders and

CC infertility) for the diagnosis of a disease. The polynucleotides may also

CC be used in screening for drugs effective in the treatment of symptomatic

CC or phenotypic manifestations of perturbing the normal function of NHP in

CC the body. Nucleotide constructs encoding NHP products are used to

CC genetically engineer host cells to express such products in vivo. These

CC host cells allow for the identification of compounds that bind to NHP

CC receptors or trigger NHP-mediated pathways.

XX
XX Novel nucleic acid encoding human CUB-domain containing protein, useful
XX for drug screening, diagnosis and treatment of physiological disorders
XX or diseases -
XX
XX Claim 4; Page 26; 33pp; English.
XX
XX The sequence represents a novel human protein (NHP) containing a CUB
XX domain (an extracellular domain). CUB proteins have been associated with
XX regulating development, modulating cellular processes and preventing
XX infectious disease. NHP nucleotide sequences are useful for gene therapy
XX of physiological disorders or diseases. NHP oligonucleotides are useful
XX as hybridisation probes for screening libraries and assessing gene
XX patterns. NHP nucleotide sequences are useful for detecting mutant or
XX inappropriately expressed NHPs (for example, those proteins associated
XX with obesity, high blood pressure, connective tissue disorders and
XX infertility) for the diagnosis of a disease. The polynucleotides may also
XX be used in screening for drugs effective in the treatment of symptomatic
XX or phenotypic manifestations of perturbing the normal function of NHP in
XX the body. Nucleotide constructs encoding NHP products are used to
XX genetically engineer host cells to express such products in vivo. These
XX host cells allow for the identification of compounds that bind to NHP
XX receptors or trigger NHP-mediated pathways.

XX disorders -
XX
XX Claim 1; Page 68-69; 75pp; English.
XX
XX The present sequence represents a polypeptide sequence which is
XX isolated from lymph node stromal cells of fsn +/- mice. The
XX polynucleotides and their polypeptides are useful for treating an
XX inflammatory disorder, disorder of immune system and cancer selected

CC from epithelial, lymphoid, myeloid, stromal and neuronal cancers, a
CC viral disorder, in particular HIV infection and for modulating the
CC growth of blood vessels. The polypeptides are useful for treating a
CC tumour necrosis factor (TNF) mediated disorder, such as those selected
CC from arthritis, inflammatory bowel disease and cardiac failure and a
CC fibroblast growth factor-mediated disorder. It is also useful in assays
CC to determine biological activity, to raise antibodies, to isolate
CC corresponding ligands or receptors, to quantify levels of protein or
CC cognate corresponding ligand or receptors, as antiinflammatory agents,
CC and in compositions for the treatment of skin, connective tissue and
CC immune system diseases. The polynucleotide is useful as marker for
CC tissue, as a chromosome marker or tags in the identification of a
CC genetic disorder.

PT Novel isolated human Neuropilin-Hy1 and Neuropilin-Hy2 polypeptides
PT useful for treating neurodegenerative diseases e.g. Alzheimer's
PT disease, and for diagnosing and mapping genetic neuronal defects
XX
PS Claim 3; Page 123-125; 152pp; English.
XX
CC The invention relates to neuropilin-like polypeptide (neuropilin-Hy1 and
CC neuropilin-Hy2) and their corresponding nucleic acids. The neuropilin-
CC like polypeptides and polynucleotides are useful in modulating neuronal
CC growth regenerative capacity, treating neurodegenerative diseases,
CC diagnosing and mapping genetic neuronal defects and degenerative diseases
CC like Alzheimer's disease and for treating learning and memory disorders.
CC They are also useful for inducing angiogenesis, neovascularisation, as
CC well as organ growth and development e.g. heart and other tissues.
CC Antagonists of neuropilin-like polypeptides are useful for treating
CC cancers and other malignant diseases. Neuropilin is used to treat
CC platelet disorders e.g. thrombocytopaenia, plastic anaemia and paroxysmal
CC nocturnal haemoglobinuria and is used in nerve tissue growth or
CC regeneration, in wound healing, tissue repair and replacement and in
CC healing of bones, incisions and ulcers. Compositions comprising the
CC sequences of the invention are useful for treating diseases of peripheral
CC nervous system e.g. Parkinson's disease, Huntington's disease, Shy-Drager
CC syndrome, amyotrophic lateral sclerosis, and traumatic disorders e.g.
CC spinal cord disorders, head trauma and cerebrovascular diseases e.g.
CC stroke, ulcers, immune deficiencies and immune disorders, infections by
CC hepatitis viruses, human immunodeficiency virus (HIV), herpes viruses,
CC mycobacteria, Leishmania spp., malaria spp., autoimmune disorders e.g.
CC multiple sclerosis, systemic lupus erythematosus, rheumatoid arthritis,
CC autoimmune pulmonary inflammation, autoimmune thyroiditis, diabetes
CC mellitus, graft-versus-host disease, myasthenia gravis and autoimmune

CC inflammatory eye disease. The nucleic acids of the invention are used in
CC gene therapy techniques. The present sequence is human neuropilin-Hyl
CC protein. Neuropilin-Hyl gene is located on chromosome 6q21.

XX
XX New neuropilin-like polypeptides for diagnosing, preventing and
PT treating neurological conditions and disorders, cancers, and for
PT inducing angiogenesis and neovascularisation -
XX
PS Claim 3; Page 118-120; 144pp; English.
XX
XX The invention relates to an isolated neuropilin-like polypeptide
CC including neuropilin-Hyl and neuropilin-Hy2, the full length cDNAs
CC encoding the proteins and the coding regions of the cDNAs. Also included
CC is a nucleic acid array comprising the cDNAs attached to a surface used
CC for detecting full-matches or mismatches to the cDNAs. The genes
CC for neuropilin-Hyl and Hy2 are located on human chromosome 6q21.
CC The nucleic acid array is useful for detecting full-matches or mismatches
CC to the cDNAs. The neuropilin-like proteins and encoding cDNAs are useful
CC in modulating neuronal growth, regenerative capacity, treating
CC neurodegenerative diseases, learning and memory disorders, diagnosing and
CC mapping genetic neuronal defects and degenerative diseases like
CC Alzheimer's disease, for inducing angiogenesis, and neovascularisation
CC and organ growth and development (e.g. the heart). The nervous system
CC disorders include lesions of central or peripheral nervous systems,
CC including traumatic lesions, ischaemic lesions, infectious lesions,
CC degenerative lesions, lesions associated with nutritional diseases or
CC disorders, neurological lesions, and lesions caused by toxic substances.
CC The neuropilin-like proteins and cDNAs are also useful as markers for
CC cancers. The neuropilin-like proteins are useful for regulating cell
CC proliferation, cell differentiation, stem cell growth factor activity,
CC for inducing proliferation of neural cells, regeneration of nerve and
CC brain tissue, for treatment of central and peripheral nervous system
CC diseases, and neuropathies, such as Parkinson's disease,
CC Huntington's disease, amyotrophic lateral sclerosis, to regulate
CC haematopoiesis and treat myeloid and lymphoid cell disorders, various
CC anaemias, and platelet disorders, such as thrombocytopaenia,
CC regeneration and treatment of lung or liver fibrosis, reperfusion
CC injury in various tissues and as a food supplement or molecular
CC weight marker. The cDNAs are useful in gene identification, genome
CC mapping, transgenics, as hybridisation probes, for primer design, for
CC gene chips and as a DNA antigen. The present sequence represents
CC neuropilin-Hyl.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Factor 8 homolog polypeptides and nucleic acids encoding them for treating coagulation related disorders such as hemophilia and stroke
Claim 1: Page 61-64; 68pp; English.
The present sequence is a cDNA encoding human Factor 8 homologue (F8H) which is a coagulation cofactor. The protein is selectively expressed in hematopoietic, heart and reproductive tissues. It has haemostatic and cerebroprotective activities. The F8H contains a Factor 5/8 signature and is useful as a therapeutic for treating coagulation related diseases such as haemophilia and stroke. The nucleic acid is useful as a hybridisation probe and amplification primer for detecting deficiencies in the level of F8H mRNA, for screening F8H gene mutations and for monitoring regulation of gene expression. Fragments of the nucleic acid are also useful as diagnostic probes and primers, and can be used in screening methods such as those using DNA chips. the present sequence is also useful as a target to screen therapeutically useful modulators of the F8H.

DR Detecting granulocyte activation by detecting differential expression

PT of genes associated with granulocyte activation, which serves as

PT diagnostic markers that is useful for monitoring disease states and

PT drug toxicity .

XX PS Claim 1; SEQ ID No 211; 114pp; English.
XX CC The invention relates to detecting (M1) granulocyte (GC) activation
CC (GCA), by detecting the level of expression of gene(s) (Gs) identified by
CC DNA chip analysis as given in the specification, and comparing
CC the expression level to an expression level in an unactivated
CC GC, where differential expression of Gs is indicative of GCA.
CC Also included are modulating (M2) GA by contacting GC with an agent
CC that alters the expression of at least one gene in Gs; (2) screening (M3)
CC for an agent capable of modulating GCA or an inflammation (especially
CC chronic) in a tissue, an allergic response in a subject, exposure of a
CC subject to a pathogen or sterile inflammatory disease using the
CC gene expression profile; (3) detecting (M4) an inflammation (especially
CC chronic) in a tissue, an allergic response in a subject, exposure of a
CC subject to a pathogen or sterile inflammatory disease, by detecting the
CC level of expression in a sample of the tissue of gene(s) from Gs, where
CC the level of expression of the gene is indicative of inflammation;
CC (4) treating (M5) an inflammation (especially chronic) or in a tissue,
CC an allergic response in a subject, exposure of a subject to a pathogen
CC or sterile inflammatory disease, by contacting a tissue having
CC inflammation with an agent that modulates the expression of gene(s)
CC from Gs in the tissue. M1 is useful for detecting GCA; M2 is useful for
CC modulating GA; M3 is useful for screening an agent capable of modulating
CC GCA preferably in an inflammation in a tissue; M4 is useful for
CC detecting an inflammation (especially chronic) in a tissue, an allergic
CC response in a subject, exposure of a subject to a pathogen or sterile
CC inflammatory disease (e.g. psoriasis, rheumatoid arthritis,
CC glomerulonephritis, asthma, thrombosis, cardiac reperfusion injury, renal
CC reperfusion injury, ARDS, adult respiratory distress syndrome,
CC inflammatory bowel disease, Crohn's disease, ulcerative colitis,
CC periodontal disease; also bacterial infection, viral infection,
CC parasitic infection, protozoal infection, fungal infection and M5 is
CC useful for treating one of the above conditions. The present
CC sequence represents a gene differentially expressed in granulocytes.
CC Note: The sequence data for this patent did not form part
CC of the printed specification, but was obtained in electronic
CC format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences.

DR New isolated polynucleotide and encoded polypeptides, useful in
XX diagnostics, forensics, gene mapping, identification of mutations
XX responsible for genetic disorders or other traits and to assess
XX biodiversity.
XX Claim 1; SEQ ID No 1289; 103pp; English.
XX The invention relates to isolated polynucleotide (I) and
XX polypeptide (II) sequences. (I) is useful as hybridisation probes,
XX polymerase chain reaction (PCR) primers, oligomers, and for chromosome
XX and gene mapping, and in recombinant production of (II). The
XX polynucleotides are also used in diagnostics as expressed sequence tags
XX for identifying expressed genes. (I) is useful in gene therapy techniques
XX to restore normal activity of (II) or to treat disease states involving
XX (II). (II) is useful for generating antibodies against it, detecting or
XX quantitating a polypeptide in tissue, as molecular weight markers and as
XX a food supplement. (II) and its binding partners are useful in medical
XX imaging of sites expressing (II). (I) and (II) are useful for treating
XX disorders involving aberrant protein expression or biological activity.
XX The polypeptide and polynucleotide sequences have applications in
XX diagnostics, forensics, gene mapping, identification of mutations
XX responsible for genetic disorders or other traits to assess biodiversity
XX and to produce other types of data and products dependent on DNA and
XX amino acid sequences. AAS64197-AAS94564 represent novel human
XX diagnostic coding sequences of the invention.
XX Note: The sequence data for this patent did not appear in the printed
XX specification, but was obtained in electronic format directly from WIPO
XX at ftp.wipo.int/pub/published_pct_sequences.

XX PT Single exon nucleic acid probes for analyzing gene expression in human
XX PT brains -
XX PS Example 4; SEQ ID NO: 25430; 650pp + Sequence Listing; English.
XX XX
XX CC The present invention provides a number of single exon nucleic acid
XX CC probes which are derived from genomic sequences expressed in the human
XX CC brain. They can be used to measure gene expression in brain cell samples,
XX CC which may enable the diagnosis and improved treatment of nervous system
XX CC diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia,
XX CC epilepsy and cancers. The present sequence is one of the probes of the
XX CC invention.

/notes="Organ: Left Pubic Bone; Vector: pT73-Pac
(Pharmacia) with a modified polylinker; Site:1: EcoR I;
Site_2: Not I; NCI_CGAP_ED1 is a normalized cDNA library
containing the following tissue(s): Chondrosarcoma cell
line C55. The library was constructed according to Bonaldo
, Lennon and Soares, Genome Research, 6:791-806, 1996.
First strand cDNA synthesis was primed with an oligo-dT
primer containing a Not I site. Double stranded cDNA was
ligated to an EcoR I adaptor, digested with Not I, and
cloned directionally into pT73-Pac vector. The
oligonucleotide used to prime the synthesis of
first-strand cDNA contains a library tag sequence that is
located between the Not I site and the (dT)18 tail. The
sequence tag for this library is GCTCAAGGCT.

 Center clone name: CH230-234N3
 ----- Summary Statistics
 Sequencing vector: Plasmid;
 Chemistry: Dye-terminator Big Dye; 100% of reads
 Assembly program: Phrap; version 0.990329
 Consensus quality: 145293 bases at least Q40
 Consensus quality: 154399 bases at least Q30
 Consensus quality: 161802 bases at least Q20

* NOTE: Estimated insert size may differ from sequence length
 (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

* NOTE: This is a 'working draft' sequence. It currently
 * consists of 74 contigs. The true order of the pieces
 * is not known and their order in this sequence record is
 * arbitrary. Gaps between the contigs are represented as
 * runs of N, but the exact sizes of the gaps are unknown.
 * This record will be updated with the finished sequence
 * as soon as it is available and the accession number will
 * be preserved.

* 1

----- Genome Center
Center: Baylor College of Medicine
Center code: BCM
Web site: http://www.hgsc.bcm.tmc.edu/
Drafting Center Code: BCM
Contact: hgsc-help@bcm.tmc.edu
----- Project Information
Center project name: HCIB
Center clone name: CTD-2011L5
----- Summary Statistics
Sequencing vector: Plasmid
Chemistry: Dye-terminator Big Dye: 100% of reads
Assembly program: Phrap; version 0.990329
Consensus quality: 161549 bases at least Q40
Consensus quality: 162327 bases at least Q30
Consensus quality: 162604 bases at least Q20
Estimated insert size: 157933; sum-of-contigs estimation
Quality coverage: 7x in Q20 bases; sum-of-contigs estimation

-----
* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently
* consists of 8 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.
*
* 1 3452: contig of 3452 bp in length
* 3453 3552: gap of unknown length
* 3553 10549: contig of 6997 bp in length
* 10550 10649: gap of unknown length
* 10650 26000: contig of 15351 bp in length
* 26001 26100: gap of unknown length
* 26101 44000: contig of 17900 bp in length
* 44001 44100: gap of unknown length
* 44101 58020: contig of 13920 bp in length
* 58021 58120: gap of unknown length
* 58121 79695: contig of 21575 bp in length
* 79696 79795: gap of unknown length
* 79796 119936: contig of 40141 bp in length
* 119937 120036: gap of unknown length
* 120037 164216: contig of 44180 bp in length.

XX
PS Claim 20; SEQ ID NO 31657; 103pp; English.
XX
CC The invention relates to isolated polynucleotide (I) and
CC polypeptide (II) sequences. (I) is useful as hybridisation probes,
CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome
CC and gene mapping, and in recombinant production of (II). The
CC polynucleotides are also used in diagnostics as expressed sequence tags
CC for identifying expressed genes. (I) is useful in gene therapy techniques
CC to restore normal activity of (II) or to treat disease states involving
CC (II). (II) is useful for generating antibodies against it, detecting or
CC quantitating a polypeptide in tissue, as molecular weight markers and as
CC a food supplement. (II) and its binding partners are useful in medical
CC imaging of sites expressing (II). (I) and (II) are useful for treating
CC disorders involving aberrant protein expression or biological activity.
CC The polypeptide and polynucleotide sequences have applications in
CC diagnostics, forensics, gene mapping, identification of mutations
CC responsible for genetic disorders or other traits to assess biodiversity
CC and to produce other types of data and products dependent on DNA and
CC amino acid sequences. ABG00010-ABG30377 represent novel human
CC diagnostic amino acid sequences of the invention.
CC Note: The sequence data for this patent did not appear in the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/published_pct_sequences.

Factor 8 homolog polypeptides and nucleic acids encoding them for
treating coagulation related disorders such as hemophilia and stroke -
Claim 3; Page 64-66; 68pp; English.
XX
The present sequence is a human Factor 8 homologue (F8H),
a coagulation cofactor which is selectively expressed in
CC haematopoietic, heart and reproductive tissues. It has haemostatic and
CC cerebroprotective activities. The F8H contains a Factor 5/8 signature
CC and is useful as a therapeutic for treating coagulation related diseases
CC such as haemophilia and stroke. The nucleic acid is useful as
CC hybridisation probe and amplification primer for detecting deficiencies
CC in the level of F8H mRNA, for screening F8H gene mutations and for
CC monitoring regulation of gene expression. Fragments of the nucleic acid
CC are also useful as diagnostic probes and primers, and can be used in
CC screening methods such as those using DNA chips. The present sequence is
CC also useful as a target to screen therapeutically useful modulators
CC of the F8H.

PT Propionibacterium acnes polypeptides and nucleic acids useful for
PT vaccinating against and diagnosing infections, especially useful for
PT treating acne vulgaris -
XX
PS Example 1; SEQ ID No 23868; 1069pp; English.
XX
CC Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic
CC polypeptides. The proteins and their associated DNA sequences are used in
CC the treatment, prevention and diagnosis of medical conditions caused by
CC P. acnes. The disorders include SAPHO syndrome (synovitis, acne,
CC pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis.
CC P. acnes is also involved in infections of bone, joints and the central
CC nervous system, however it is particularly involved in the inflammatory
CC lesions associated with acne vulgaris. A method for detecting the
CC presence or absence of P. acnes in a patient comprises contacting a
CC sample with a binding agent that binds to the proteins of the invention
CC and determining the amount of bound protein in the sample. The
CC polypeptides may be used as antigens in the production of antibodies
CC specific for P. acnes proteins. These antibodies can be used to
CC downregulate expression and activity of P. acnes polypeptides and
CC therefore treat P. acnes infections. The antibodies may also be used as
CC diagnostic agents for determining P. acnes presence, for example, by
CC enzyme linked immunosorbent assay (ELISA).
CC Note: the sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/published_pct_sequences.

PT One hundred and twenty two nucleic acids encoding PRO polypeptides,
PT useful for treating a PRO related disorder and for diagnosing tumours
PT such as lung cancer, colon cancer, breast tumour, prostate tumour, rectal
PT tumour or liver tumour -
XX
PS Claim 11; Figure 30; 359pp; English.

XX The invention relates to one hundred and twenty two nucleic acids
 CC encoding PRO polypeptides. The sequences of the 122 PRO polynucleotides
 CC encode human secreted proteins. The PRO nucleic acids, polypeptides,
 CC agonists and antagonists are useful for treating a PRO related disorder.
 CC The PRO polypeptides are useful for diagnosing tumours, especially lung
 CC cancer, colon cancer, breast tumour, prostate tumour, rectal tumour or
 CC liver tumour. The PRO polypeptides are useful for stimulating the
 CC proliferation of, or gene expression, in pericyte cells, for stimulating
 CC the proliferation or differentiation of chondrocyte cells, for
 CC stimulating the release of tumour necrosis factor-alpha from human blood,
 CC for stimulating or inhibiting the proliferation of normal human dermal
 CC fibroblast cells. The PRO polypeptide may also be used as molecular
 CC weight markers and for tissue typing. The PRO nucleic acids have
 CC applications in molecular biology, including use as hybridisation probes,
 CC and in chromosome and gene mapping. AAU83592-AAU83713 represent human PRO
 CC protein sequences of the invention.

XX New human drug metabolizing enzymes and polynucleotides encoding the
 PT enzyme for diagnosing, preventing or treating cell proliferative,
 PT autoimmune/inflammatory, endocrine, eye, metabolic and gastrointestinal
 PT disorders

XX Claim 1; Page 145-146; 158pp; English.

XX The present sequence is human drug metabolising enzyme (DME)-10.
 CC DME polypeptide, polynucleotide and modulators are useful for
 CC diagnosis, treatment and prevention of autoimmune/inflammatory,
 CC cell proliferative, developmental, endocrine, eye, metabolic,
 CC and gastrointestinal disorders, including liver disorders.

XX The autoimmune/inflammatory disorders treatable include

CC AIDS, adult respiratory distress syndrome, Addison's disease,
 CC allergies, anaemia, asthma, atherosclerosis, osteoporosis, autoimmune
 CC haemolytic anaemia, autoimmune thyroiditis, Crohn's disease, atopic
 CC dermatitis, diabetic mellitus, Graves' disease, glomerulonephritis,
 CC rheumatoid arthritis, scleroderma, systemic lupus erythematosus,
 CC systemic sclerosis, ulcerative colitis, haemodialysis and uveitis,
 CC viral, bacterial, fungal, parasitic, protozoal, helminthic infections
 CC and trauma, and cell proliferative disorders such as cancer, actinic
 CC keratosis, arteriosclerosis, atherosclerosis, bursitis, cirrhosis,
 CC hepatitis and psoriasis. Developmental disorders include anaemia, renal
 CC tubular acidosis, epilepsy, hypothyroidism and cataract, and endocrine
 CC disorders include disorders of hypothalamus and pituitary, disorders
 CC associated with hypopituitarism, including sarcoidosis, diabetes
 CC insipidus, hypogonadism, disorders associated with hypothyroidism
 CC including goitre, acute thyroiditis, Graves' disease, disorders
 CC associated with hyperparathyroidism, pancreatic disorders such as type I
 CC or type II diabetes mellitus, disorders associated with adrenals such as
 CC hyperplasia, Cushing's disease, endometriosis, infertility,
 CC hypergonadal disorders, and gynaecomastia. Eye disorders include
 CC conjunctivitis, keratitis, glaucoma and macular degeneration, and
 CC metabolic disorders include diabetes, cystic fibrosis, goitre,
 CC hypercholesterolaemia, hypoglycaemia, hyperlipidaemia, lysosomal storage
 CC diseases, obesity, phenylketonuria and hypocalcaemia. Also the molecules
 CC are useful for treating gastrointestinal disorders such as dysphagia,
 CC gastritis, peptic ulcer, cholelithiasis, cirrhosis, hepatitis,
 CC hyperbilirubinaemia, constipation, diarrhoea, jaundice, Wilson's disease,
 CC thrombosis and hepatic tumours. The DME polypeptide is also useful for
 CC screening its agonist or antagonist.

 XX Novel reproduction-specific protein, useful for treating disorders of
 PT reduced sperm count, enhancing/increasing sperm count and/or sperm
 PT activity -
 XX Claim 22; Fig 6; 15lpp; English.
 XX The present invention relates to the isolation of novel mammalian and
 CC human reproductive-specific proteins (AAU07859-AAU07899), and the
 CC nucleic acids encoding them. The nucleic acids encoding
 CC reproductive-specific proteins are useful for diagnosing infertility
 CC which is a result of reduced sperm count, reduced sperm motility,
 CC malformed sperm or combinations of these. The sequences of the invention
 CC are useful as markers for spermatogonial cells, for identifying genes or
 CC proteins characteristic of male infertility, diagnosing or aiding in
 CC the diagnosis of infertility in men, and for contraception in which
 CC sperm production or sperm count is reduced or defective sperm is
 CC produced. Antibodies to reproductive-specific proteins are useful for
 CC determining the presence of these proteins in a sample obtained from a
 CC man being assessed for infertility, for identifying the expression of
 CC genes in particular cell type or particular developmental stage, for
 CC studies of spermatogenesis, and for immunofluorescence of germ cells or
 CC in western blots for assessing the presence of the protein the antibody
 CC binds. The sequences of the invention are also useful for treating
 CC disorders of reduced sperm count, and for increasing sperm count and/or
 CC sperm activity. The nucleic acids of the invention are useful in gene
 CC therapy. AAU07859-AAU07882 represent the mammalian reproduction-specific
 CC proteins of the present invention.

 XX New DNA combined protein for controlling expression of a xylanase gene
 PT and for efficient production of xylanase -
 XX Claim 1; Fig 2-4; 19pp; Japanese.

XX This invention relates to a protein which controls the expression of a
 CC xylanase gene. The invention includes the protein and DNA sequence, and
 CC a recombinant plasmid containing DNA encoding the xylanase expression
 CC control protein. The DNA can be used for the efficient production of
 CC xylanase. The present sequence the protein of the invention.

XX New isolated nucleic acid detection reagent for detecting 1000 or more
 PT genes from Drosophila and for elucidating cell signalling and cell-cell
 PT interactions -

XX Disclosure; SEQ ID NO 14340; 21pp + Sequence Listing; English.

XX The invention relates to an isolated nucleic acid detection reagent
 CC capable of detecting 1000 or more genes from Drosophila. The invention is
 CC useful in developmental biology and in elucidating cell signalling and
 CC cell-cell interactions in higher eukaryotes for the development of
 CC insecticides, therapeutics and pharmaceutical drugs. The invention
 CC discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA

CC sequences (ABLO1840-ABL16175) and the encoded proteins
 CC (ABB57737-ABB72072).
 CC The sequence data for this patent did not form part of the printed
 CC specification, but was obtained in electronic format directly from WIPO
 CC at ftp.wipo.int/pub/published_pct_sequences.

 DR Isolated nucleic acid molecule encoding a human secreted protein is
 PT used in preventing, treating or ameliorating a medical condition
 PT Disclosure; Page 13; 436pp; English.
 PS The polynucleotide sequences given in AAC69597-C69644 encode the human
 CC secreted proteins given in AAB38522-B38569. Sequences given in
 CC AAB38570-B38647 represent alternative proteins encoded by the genes, and
 CC also represent proteins which are homologous to the gene products. The
 CC secreted proteins have activities based on the tissues in which they are
 CC expressed. Examples of the activities include immunosuppressive;
 CC antiarthritic; antirheumatic; antiproliferative; cytostatic; cardiant;
 CC vasotropic; cerebroprotective; neotropic; neuroprotective;
 CC antibacterial; virucide; fungicide; and ophthalmological. The proteins,
 CC polynucleotides and/or agonists/antagonists are used to prevent, treat or
 CC ameliorate medical conditions which include autoimmune diseases e.g.
 CC rheumatoid arthritis, hyperproliferative disorders e.g. neoplasms of the

CC breast or liver, cardiovascular disorders e.g. cardiac arrest,
 CC cerebrovascular disorders e.g. cerebral ischaemia, angiogenesis, nervous
 CC system disorders e.g. Alzheimer's disease, infections caused by bacteria,
 CC viruses and fungi and ocular disorders e.g. corneal infection. The
 CC polypeptides can also be used to aid wound healing and epithelial cell
 CC proliferation, to prevent skin aging due to sunburn, to maintain organs
 CC before transplantation, for supporting cell culture of primary tissues,
 CC to regenerate tissues and in chemotaxis. The polypeptides can also be
 CC used as a food additive or preservative to increase or decrease storage
 CC capabilities. Sequences in AAC69597-C69644 and AAB38521 are used during
 CC the isolation and characterisation of the genes of the invention.

 XX New isolated polynucleotide and encoded polypeptides, useful in
 PT diagnostics, forensics, gene mapping, identification of mutations
 PT responsible for genetic disorders or other traits and to assess
 PT biodiversity
 XX Claim 20: SEQ ID No 48406; 103pp; English.
 XX The invention relates to isolated polynucleotide (I) and
 CC polypeptide (II) sequences, (I) is useful as hybridisation probes,
 CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome
 CC and gene mapping, and in recombinant production of (II). The
 CC polynucleotides are also used in diagnostics as expressed sequence tags
 CC for identifying expressed genes. (I) is useful in gene therapy techniques
 CC to restore normal activity of (II) or to treat disease states involving

CC (II). (II) is useful for generating antibodies against it, detecting or
 CC quantitating a polypeptide in tissue, as molecular weight markers and as
 CC a food supplement. (II) and its binding partners are useful in medical
 CC imaging of sites expressing (II). (I) and (II) are useful for treating
 CC disorders involving aberrant protein expression or biological activity.
 CC The polypeptide and polynucleotide sequences have applications in
 CC diagnostics, forensics, gene mapping, identification of mutations
 CC responsible for genetic disorders or other traits to assess biodiversity
 CC and to produce other types of data and products dependent on DNA and
 CC amino acid sequences. ABG00010-ABG30377 represent novel human
 CC diagnostic amino acid sequences of the invention.
 CC Note: The sequence data for this patent did not appear in the printed
 CC specification, but was obtained in electronic format directly from WIPO

XX

CC This sequence represents a secreted human protein encoded by the gene
 CC clone detailed in the descriptor line. The gene can be used to generate
 CC fusion proteins by linking to the gene to a human immunoglobulin Fc
 CC portion (e.g. AAV34277) for increasing the stability of the fused
 CC protein as compared to the human protein only.

CC

CC The invention relates to 28 novel genes and their fragments (nucleic
 CC acid sequences: AAV34286-V34325; amino acid sequences AAW75196-W75235)

CC

CC which are useful for preventing, treating or ameliorating medical
 CC conditions e.g. by protein or gene therapy. Also, pathological

CC

CC conditions can be diagnosed by determining the amount of the new
 CC polypeptides in a sample or by determining the presence of mutations in
 CC the new polynucleotides. Specific uses are described for each of the 28

CC

CC polynucleotides, based on which tissues they are most highly expressed in
 CC (see AAV34286 for described uses).

CC and organ growth and development (e.g. the heart). The nervous system
CC disorders include lesions of central or peripheral nervous systems,
CC including traumatic lesions, ischaemic lesions, infectious lesions,
CC degenerative lesions, lesions associated with nutritional diseases or
CC disorders, neurological lesions, and lesions caused by toxic substances.
CC The neuropilin-like proteins and cDNAs are also useful as markers for
CC cancers. The neuropilin-like proteins are useful for regulating cell
CC proliferation, cell differentiation, stem cell growth factor activity,
CC for inducing proliferation of neural cells, regeneration of nerve and
CC brain tissue, for treatment of central and peripheral nervous system
CC diseases, and neuropathies, such as Parkinson's disease,
CC Huntington's disease, amyotrophic lateral sclerosis, to regulate
CC haematopoiesis and treat myeloid and lymphoid cell disorders, various
CC anaemias, and platelet disorders, such as thrombocytopaenia,
CC regeneration and treatment of lung or liver fibrosis, reperfusion
CC injury in various tissues and as a food supplement or molecular
CC weight marker. The cDNAs are useful in gene identification, genome
CC mapping, transgenics, as hybridisation probes, for primer design, for
CC gene chips and as a DNA antigen. The present sequence encodes
CC neuropilin-Hy2.

XX
PS Claim 1; SEQ ID NO 210; 509pp; English.
XX
CC The present invention provides the protein and coding sequences of 444
CC novel human proteins. These were isolated from expressed sequences tags
CC (ESTs). They can be used to stimulate cell growth, to regulate

CC haematopoiesis e.g. to treat aplastic anaemia, to help tissue regrowth
CC e.g. in burn treatment, to regulate the immune system e.g. to treat
CC multiple sclerosis, to regulate activin or inhibin e.g. to treat
CC infertility, to regulate haemostasis or thrombolysis e.g. to treat
CC stroke and cancer, to screen for drugs, to treat inflammatory conditions
CC e.g. rheumatoid arthritis, and to treat nervous system disorders e.g.
CC Parkinson's disease. The present sequence is a coding sequence of the
CC invention.

PT Nucleic acids encoding 4277 human colon cancer-associated polypeptides,
PT useful for preventing, diagnosing and/or treating colorectal cancers -
XX
PS Claim 1; Page 3444-3445; 9803pp; English.
XX
CC AAH32943 to AAH37195 and AAG73514 to AAG77788 represent human colon
CC cancer-associated nucleic acid molecules (N) and proteins (P), where
CC the proteins are collectively known as colon cancer antigens. The colon
CC cancer antigens have cytostatic activity and can be used in gene
CC therapy and vaccine production. N and P may be used in the prevention,
CC diagnosis and treatment of diseases associated with inappropriate P
CC expression. For example, N and P may be used to treat disorders
CC associated with decreased expression by rectifying mutations or deletions
CC in a patient's genome that affect the activity of P by expressing
CC inactive proteins or to supplement the patients own production of P.
CC Additionally, N may be used to produce the colon cancer-associated Ps,
CC by inserting the nucleic acids into a host cell and culturing the cell
CC to express the proteins. N and P can be used in the prevention, diagnosis
CC and treatment of colorectal carcinomas and cancers. AAH37196 to AAH37204
CC and AAB77789 represent sequences used in the exemplification of the
CC present invention.
CC N.B. Pages 666 to 682 and page 7053 of the sequence listing were

CC missing at time of publication, meaning no sequences are present for
CC SEQ ID NO:1027 to 1052, 7921 and 7922.

PT Factor 8 homolog polypeptides and nucleic acids encoding them for
PT treating coagulation related disorders such as hemophilia and stroke
XX
XX
PS Claim 1; Page 61-64; 68pp; English.
XX
XX The present sequence is a cDNA encoding human Factor 8 homologue (F8H)
CC which is a coagulation cofactor. The protein is selectively expressed in
CC haematopoietic, heart and reproductive tissues. It has haemostatic and
CC cerebroprotective activities. The F8H contains a Factor 5/8 signature
CC and is useful as a therapeutic for treating coagulation related diseases
CC such as haemophilia and stroke. The nucleic acid is useful as
CC hybridisation probe and amplification primer for detecting deficiencies
CC in the level of F8H mRNA, for screening F8H gene mutations and for
CC monitoring regulation of gene expression. Fragments of the nucleic acid
CC are also useful as diagnostic probes and primers, and can be used in
CC screening methods such as those using DNA chips. The present sequence is
CC also useful as a target to screen therapeutically useful modulators
CC of the F8H.

XX
XX New isolated polynucleotide and encoded polypeptides, useful in
PT diagnostics, forensics, gene mapping, identification of mutations
PT responsible for genetic disorders or other traits and to assess
PT biodiversity
XX
PS Claim 1; SEQ ID NO 1289; 103pp; English.
XX
XX The invention relates to isolated polynucleotide (I) and
CC polypeptide (II) sequences. (I) is useful as hybridisation probes,
CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome
CC and gene mapping, and in recombinant production of (II). The
CC polynucleotides are also used in diagnostics as expressed sequence tags
CC for identifying expressed genes. (I) is useful in gene therapy techniques
CC to restore normal activity of (II) or to treat disease states involving
CC (II). (II) is useful for generating antibodies against it, detecting or
CC quantitating a polypeptide in tissue, as molecular weight markers and as
CC a food supplement. (II) and its binding partners are useful in medical
CC imaging of sites expressing (II). (I) and (II) are useful for treating
CC disorders involving aberrant protein expression or biological activity.
CC The polypeptide and polynucleotide sequences have applications in
CC diagnostics, forensics, gene mapping, identification of mutations
CC responsible for genetic disorders or other traits to assess biodiversity
CC and to produce other types of data and products dependent on DNA and
CC amino acid sequences. AAS64197-AAS94564 represent novel human
CC diagnostic coding sequences of the invention.
CC Note: The sequence data for this patent did not appear in the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/published_pct_sequences.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

 ----- Summary Statistics
 Sequencing vector: M13; M77815; 100% of reads
 Chemistry: Dye-terminator Big Dye; 100% of reads
 Assembly program: Phrap; version 0.960731
 Consensus quality: 182870 bases at least Q40
 Consensus quality: 187032 bases at least Q30
 Consensus quality: 188925 bases at least Q20
 Insert size: 194000; agarose-1p
 Insert size: 191247; sum-of-contigs
 Quality coverage: 5.0 in Q20 bases; agarose-1p
 Quality coverage: 5.1 in Q20 bases; sum-of-contigs

* NOTE: This is a 'working draft' sequence. It currently
* consists of 11 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

* 1 472: contig of 472 bp in length
* 473 572: gap of 100 bp
* 573 3945: contig of 3373 bp in length
* 3946 4045: gap of 100 bp
* 4046 11056: contig of 7011 bp in length
* 11057 11156: gap of 100 bp in length
* 11157 17728: contig of 6572 bp in length
* 17729 17828: gap of 100 bp

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

/note="Organ: Left Pubic Bone; Vector: p7T3-Pac (Pharmacia) with a modified polylinker; Site_1: EcoR I; Site_2: Not I; NCI-CGAP_ED1 is a normalized cDNA library containing the following tissue(s): Chondrosarcoma cell line C95. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into p7T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is GCTCAAGGCT.

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

NEDO human cDNA sequencing project supported by Ministry of
Economy, Trade and Industry of Japan; cDNA full insert sequencing:
Research Association for Biotechnology (RAB); cDNA library
construction: Helix Research Institute (HRI) (supported by Japan

Key Technology Center etc.); 5'- & 3'-end one pass sequencing: RAB, HRI, and Biotechnology Center, National Institute of Technology and Evaluation; clone selection for full insert sequencing: RAB and HRI.

Direct Submission
Submitted (13-NOV-1999), Whitehead Institute/MIT Center for Genome
Research, 320 Charles Street, Cambridge, MA 02141, USA
On Mar 26, 2000 this sequence version replaced gi:6692347.

All repeats were identified using RepeatMasker:
Smit, A.F.A. & Green, P. (1996-1997)
<http://ftp.genome.washington.edu/RM/RepeatMasker.html>

----- Genome Center
Center: Whitehead Institute/ MIT Center for Genome Research
Center code: WIBR
Web site: <http://www-seq.wi.mit.edu>
Contact: sequence_submissions@genome.wi.mit.edu

----- Project Information
Center project name: L1852
Center clone name: 319-J-24
----- Summary Statistics

Sequencing vector: M13; M77815; 100% of reads
Chemistry: Dye-terminator Big Dye; 100% of reads
Assembly program: Phrap; version 0.960731
Consensus quality: 182870 bases at least Q40
Consensus quality: 187032 bases at least Q30
Consensus quality: 188925 bases at least Q20

Insert size: 194000; agarose-fp
Quality coverage: 5.0 in Q20 bases; agarose-fp
Quality coverage: 5.1 in Q20 bases; sum-of-contigs

----- NOTE: This is a 'working draft' sequence. It currently
consists of 11 contigs. The true order of the pieces
is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as
runs of N, but the exact sizes of the gaps are unknown.
This record will be updated with the finished sequence
as soon as it is available and the accession number will
be preserved.

----- 472: contig of 472 bp in length

Center clone name: 322_A_20
-----
* NOTE: This record contains 164 individual
* sequencing reads that have not been assembled into
* contigs. Runs of N are used to separate the reads
* and the order in which they appear is completely
* arbitrary. Low-pass sequence sampling is useful for
* identifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
* the record is updated, the accession number will
* be preserved.
*
* 1 836: contig of 836 bp in length

Direct Submission

Submitted (11-JUL-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

----- Genome Center

Center: Baylor College of Medicine

Center code: BCM

Web site: <http://www.hgsc.bcm.tmc.edu/>

Contact: hgsc-help@bcm.tmc.edu

----- Project Information

Center project name: GJZQ

Center clone name: CH230-234N3

----- Summary Statistics

Sequencing vector: Plasmid;

Chemistry: Dye-terminator Big Dye; 100% of reads

Assembly program: Phrap; version 0.990329

Consensus quality: 145293 bases at least Q40

Consensus quality: 154399 bases at least Q30

Consensus quality: 161802 bases at least Q20

* NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

* NOTE: This is a 'working draft' sequence. It currently consists of 74 contigs. The true order of the pieces is not known and their order in this sequence record is

* arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. * This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

RESULT 8
 US-08-480-229C-19
 ; Sequence 19, Application US/08480229C
 ; Patent No. 5874562
 ; GENERAL INFORMATION:
 ; APPLICANT: Quertermous, Thomas
 ; APPLICANT: Hogan, Brigid
 ; APPLICANT: Snodgrass, H. Ralph
 ; APPLICANT: Zupancic, Thomas J.
 ; TITLE OF INVENTION: DEVELOPMENTALLY-REGULATED ENDOTHELIAL
 ; TITLE OF INVENTION: CELL LOCUS-1
 ; NUMBER OF SEQUENCES: 29
 ; CORRESPONDENCE ADDRESS:
 ; ADDRESSEE: Pennie & Edmonds LLP
 ; STREET: 1155 Avenue of the Americas
 ; CITY: New York
 ; STATE: New York
 ; COUNTRY: United States
 ; ZIP: 10036-2711
 ; COMPUTER READABLE FORM:
 ; MEDIUM TYPE: Floppy disk
 ; COMPUTER: IBM PC compatible
 ; OPERATING SYSTEM: PC-DOS/MS-DOS
 ; SOFTWARE: PatentIn Release #1.0, Version #1.30
 ; CURRENT APPLICATION DATA:
 ; APPLICATION NUMBER: US/08/480,229C
 ; FILING DATE: 07-JUN-1995
 ; CLASSIFICATION: 536
 ; ATTORNEY/AGENT INFORMATION:
 ; NAME: Poissant, Brian M.
 ; REGISTRATION NUMBER: 28,462
 ; REFERENCE/DOCKET NUMBER: 8907-0026-999
 ; TELECOMMUNICATION INFORMATION:
 ; TELEPHONE: (212) 790-9090
 ; TELEFAX: (212) 869-8864/9741
 ; TELEX: 66141 Pennie
 ; INFORMATION FOR SEQ ID NO: 19:
 ; SEQUENCE CHARACTERISTICS:
 ; LENGTH: 318 base pairs
 ; TYPE: nucleic acid
 ; STRANDEDNESS: single
 ; TOPOLOGY: unknown
 ; MOLECULE TYPE: DNA (genomic)
 ; US-08-480-229C-19

Query Match 3.4%; Score 78.6; DB 2; Length 318;

XX
PT Factor 8 homolog polypeptides and nucleic acids encoding them for
PT treating coagulation related disorders such as hemophilia and stroke
XX
PS Claim 1: Page 61-64; 68pp; English.
XX
CC The present sequence is a cDNA encoding human Factor 8 homologue (F8H)
CC which is a coagulation cofactor. The protein is selectively expressed in
CC haematopoietic, heart and reproductive tissues. It has haemostatic and
CC cardioprotective activities. The F8H contains a factor 5/8 signature
CC and is useful as a therapeutic for treating coagulation related diseases
CC such as haemophilia and stroke. The nucleic acid is useful as
CC hybridisation probe and amplification primer for detecting deficiencies
CC in the level of F8H mRNA, for screening F8H gene mutations and for
CC monitoring regulation of gene expression. Fragments of the nucleic acid
CC are also useful as diagnostic probes and primers, and can be used in
CC screening methods such as those using DNA chips. The present sequence is
CC also useful as a target to screen therapeutically useful modulators
CC of the F8H.

XX Detecting granulocyte activation by detecting differential expression
of genes associated with granulocyte activation, which serves as
diagnostic markers that is useful for monitoring disease states and
drug toxicity -

XX Claim 1; SEQ ID No 211; 114pp; English.

XX The invention relates to detecting (M1) granulocyte (GC) activation
(GCA), by detecting the level of expression of gene(s) (Gs) identified by
DNA chip analysis as given in the specification, and comparing
the expression level to an expression level in an unactivated
GC, where differential expression of Gs is indicative of GCA.
XX Also included are modulating (M2) GA by contacting GC with an agent
that alters the expression of at least one gene in Gs; (2) screening (M3)
chronic) in a tissue, an allergic response in a subject, exposure of a
subject to a pathogen or sterile inflammatory disease using the
gene expression profile; (3) detecting (M4) an inflammation (especially
chronic) in a tissue, an allergic response in a subject, exposure of a
subject to a pathogen or sterile inflammatory disease, by detecting the
level of expression in a sample of the tissue of gene(s) from Gs, where
the level of expression of the gene is indicative of inflammation;
XX (4) treating (M5) an inflammation (especially chronic) or in a tissue,
an allergic response in a subject, exposure of a subject to a pathogen
or sterile inflammatory disease, by contacting a tissue having
inflammation with an agent that modulates the expression of gene(s)
from Gs in the tissue. M1 is useful for detecting GCA; M2 is useful for
modulating GA; M3 is useful for screening an agent capable of modulating
GCA preferably in an inflammation in a tissue; M4 is useful for
detecting an inflammation (especially chronic) in a tissue, an allergic
response in a subject, exposure of a subject to a pathogen or sterile
inflammatory disease (e.g. psoriasis, rheumatoid arthritis,
glomerulonephritis, asthma, thrombosis, cardiac reperfusion syndrome,
reflexion injury, ARDS, adult respiratory distress syndrome,
inflammatory bowel disease, Crohn's disease, ulcerative colitis,
periodontal disease; also bacterial infection, viral infection, and
parasitic infection, protozoal infection, fungal infection, and M5 is
useful for treating one of the above conditions. The present
sequence represents a gene differentially expressed in granulocytes.
XX Note: The sequence data for this patent did not form part
of the printed specification, but was obtained in electronic
format directly from WIPO at
ftp.wipo.int/pub/published_pct_sequences.

PT		New isolated polynucleotide and encoded polypeptides, useful in	
PT		diagnostics, forensics, gene mapping, identification of mutations	
PT		responsible for genetic disorders or other traits and to assess	
PT		biodiversity	
XX			
PS	Claim 1; SEQ ID No 1289; 103pp; English.		
XX			
CC		The invention relates to isolated polynucleotide (I) and	
CC		polypeptide (II) sequences. (I) is useful as hybridisation probes,	
CC		polymerase chain reaction (PCR) primers, oligomers, and for chromosome	
CC		and gene mapping, and in recombinant production of (II). The	
CC		polynucleotides are also used in diagnostics as expressed sequence tags	
CC		for identifying expressed genes. (I) is useful in gene therapy techniques	
CC		to restore normal activity of (II) or to treat disease states involving	
CC		(II). (II) is useful for generating antibodies against it, detecting or	
CC		quantitating a polypeptide in tissue, as molecular weight markers and as	
CC		a food supplement. (II) and its binding partners are useful in medical	
CC		imaging of sites expressing (II). (I) and (II) are useful for treating	
CC		disorders involving aberrant protein expression or biological activity.	
CC		The polypeptide and polynucleotide sequences have applications in	
CC		diagnostics, forensics, gene mapping, identification of mutations	
CC		responsible for genetic disorders or other traits to assess biodiversity	
CC		and to produce other types of data and products dependent on DNA and	
CC		amino acid sequences. AA564197-AA594564 represent novel human	
CC		diagnostic coding sequences of the invention.	

CC Note: The sequence data for this patent did not appear in the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/published_pct_sequences.

XX

CC The present invention provides a number of single exon nucleic acid
CC probes which are derived from genomic sequences expressed in the human
CC bone marrow. They can be used to measure gene expression in bone marrow
CC samples, which may enable the improved diagnosis and treatment of cancers
CC such as lymphoma, leukaemia and myeloma. The present sequence is one of
CC the probes of the invention.

NBHPu, and fetal heart NBH19W) were mixed, and ss circles
were made in vitro. Following RAP purification, this DNA
was used as tracer in a subtractive hybridization
reaction. The driver was PCR-amplified cDNAs from pools of
5,000 clones made from the same 3 libraries. The pools
consisted of I.M.A.G.E. clones 260232-265223,
340488-345479, and 484488-489479."

PT

XX Claim 3; Page 64-66; 68pp; English.
XX The present sequence is a human Factor 8 homologue (F8H),
CC a coagulation cofactor which is selectively expressed in
CC haematopoietic, heart and reproductive tissues. It has haemostatic and
CC cerebroprotective activities. The F8H contains a Factor 5/8 signature
CC and is useful as a therapeutic for treating coagulation related diseases
CC such as haemophilia and stroke. The nucleic acid is useful as
CC hybridisation probe and amplification primer for detecting deficiencies
CC in the level of F8H mRNA, for screening F8H gene mutations and for
CC monitoring regulation of gene expression. Fragments of the nucleic acid
CC are also useful as diagnostic probes and primers, and can be used in
CC screening methods such as those using DNA chips. The present sequence is
CC also useful as a target to screen therapeutically useful modulators
CC of the F8H.

XX Nucleic acids encoding 4277 human colon cancer-associated polypeptides,
XX useful for preventing, diagnosing and/or treating colorectal cancers -
XX Claim 11; Page 7657-7660; 9803pp; English.
XX AAH32943 to AAH37195 and AAG73514 to AAG77788 represent human colon
XX cancer-associated nucleic acid molecules (N) and proteins (P), where
XX the proteins are collectively known as colon cancer antigens. The colon
XX cancer antigens have cytostatic activity and can be used in gene
XX therapy and vaccine production. N and P may be used in the prevention,
XX diagnosis and treatment of diseases associated with inappropriate P
XX expression. For example, N and P may be used to treat disorders
XX associated with decreased expression by rectifying mutations or deletions
XX in a patient's genome that affect the activity of P by expressing
XX inactive proteins or to supplement the patients own production of P.
XX Additionally, N may be used to produce the colon cancer-associated Ps,
XX by inserting the nucleic acids into a host cell and culturing the cell
XX to express the proteins. N and P can be used in the prevention, diagnosis
XX and treatment of colorectal carcinomas and cancers. AAH37196 to AAH37204
XX and AAB77789 represent sequences used in the exemplification of the
XX present invention.
XX N.B. Pages 666 to 682 and page 7053 of the sequence listing were
XX missing at time of publication, meaning no sequences are present for
XX SEQ ID NO:1027 to 1052, 7921 and 7922.

XX Novel isolated human Neuropilin-Hy1 and Neuropilin-Hy2 polypeptides
PT useful for treating neurodegenerative diseases e.g. Alzheimer's
PT disease, and for diagnosing and mapping genetic neuronal defects

XX Claim 3; Page 128-130; 152pp; English.

The invention relates to neuropilin-like polypeptide (neuropilin-Hy1 and
neuropilin-Hy2) and their corresponding nucleic acids. The neuropilin-
like polypeptides and polynucleotides are useful in modulating neuronal
growth regenerative capacity, treating neurodegenerative diseases,
diagnosing and mapping genetic neuronal defects and degenerative diseases
like Alzheimer's disease and for treating learning and memory disorders.
They are also useful for inducing angiogenesis, neovascularisation, as
well as organ growth and development e.g. heart and other tissues.
Antagonists of neuropilin-like polypeptides are useful for treating
cancers and other malignant diseases. Neuropilin is used to treat
platelet disorders e.g. thrombocytopenia, plastic anaemia and paroxysmal
nocturnal haemoglobinuria and is used in nerve tissue growth or
regeneration, in wound healing, tissue repair and replacement and in
healing of bones, incisions and ulcers. Compositions comprising the
sequences of the invention are useful for treating diseases of peripheral
nervous system e.g. Parkinson's disease, Huntington's disease, Shy-Drager
syndrome, amyotrophic lateral sclerosis, and traumatic disorders e.g.
stroke, ulcers, immune deficiencies and immune disorders, infections by
hepatitis viruses, human immunodeficiency virus (HIV), herpes viruses,
mycobacteria, Leishmania spp., malaria spp., autoimmune disorders e.g.
multiple sclerosis, systemic lupus erythematosus, rheumatoid arthritis,
autoimmune pulmonary inflammation, autoimmune thyroiditis, diabetes
mellitus, graft-versus-host disease, myasthenia gravis and autoimmune
inflammatory eye disease. The nucleic acids of the invention are used in
gene therapy techniques. The present sequence is human neuropilin-Hy2
protein. Neuropilin-Hy2 gene is located on chromosome 6q21.

XX Claim 20; SEQ ID NO 654; 509pp; English.
XX
XX The present invention provides the protein and coding sequences of 444
CC novel human proteins. These were isolated from expressed sequences tags
CC (ESTs). They can be used to stimulate cell growth, to regulate
CC haematopoiesis e.g. to treat aplastic anaemia, to help tissue regrowth
CC e.g. in burn treatment, to regulate the immune system e.g. to treat
CC multiple sclerosis, to regulate activin or inhibin e.g. to treat
CC infertility, to regulate haemostasis or thrombolysis e.g. to treat
CC stroke and cancer, to screen for drugs, to treat inflammatory conditions
CC e.g. rheumatoid arthritis, and to treat nervous system disorders e.g.
CC Parkinson's disease. The present sequence is a protein of the invention.

XX
XX Novel isolated human Neuropilin-Hy1 and Neuropilin-Hy2 polypeptides
XX useful for treating neurodegenerative diseases e.g. Alzheimer's
XX disease, and for diagnosing and mapping genetic neuronal defects -
XX
XX Disclosure; Page 131-132; 152pp; English.
XX
XX The invention relates to neuropilin-like polypeptide (neuropilin-Hy1 and
XX neuropilin-Hy2) and their corresponding nucleic acids. The neuropilin-
XX like polypeptides and polynucleotides are useful in modulating neuronal
XX growth regenerative capacity, treating neurodegenerative diseases,
XX diagnosing and mapping genetic neuronal defects and degenerative diseases
XX like Alzheimer's disease and for treating learning and memory disorders.
XX They are also useful for inducing angiogenesis, neovascularisation, as
XX well as organ growth and development e.g. heart and other tissues.
XX Antagonists of neuropilin-like polypeptides are useful for treating
XX cancers and other malignant diseases. Neuropilin is used to treat
XX platelet disorders e.g. thrombocytopaenia, plastic anaemia and paroxysmal
XX nocturnal haemoglobinuria and is used in nerve tissue growth or
XX regeneration, in wound healing, tissue repair and replacement and in
XX healing of bones, incisions and ulcers. Compositions comprising the
XX sequences of the invention are useful for treating diseases of peripheral
XX nervous system e.g. Parkinson's disease, Huntington's disease, Shy-Drager
XX syndrome, amyotrophic lateral sclerosis, and traumatic disorders e.g.
XX spinal cord disorders, head trauma and cerebrovascular diseases e.g.
XX stroke, ulcers, immune deficiencies and immune disorders, infections by
XX hepatitis viruses, human immunodeficiency virus (HIV), herpes viruses,
XX mycobacteria, Leishmania spp., malaria spp., autoimmune disorders e.g.
XX multiple sclerosis, systemic lupus erythematosus, rheumatoid arthritis,
XX autoimmune pulmonary inflammation, autoimmune thyroiditis, diabetes
XX mellitus, graft-versus-host disease, myasthenia gravis and autoimmune
XX inflammatory eye disease. The nucleic acids of the invention are used in
XX gene therapy techniques. The present sequence is human neuropilin-Hy2
XX mature protein.

XX New isolated polynucleotide and encoded polypeptides, useful in
 PT diagnostics, forensics, gene mapping, identification of mutations
 PT responsible for genetic disorders or other traits and to assess
 PT biodiversity -
 XX Claim 20; SEQ ID No 31657; 103pp; English.
 XX The invention relates to isolated polynucleotide (I) and
 CC polypeptide (II) sequences. (I) is useful as hybridisation probes,
 CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome
 CC and gene mapping, and in recombinant production of (II). The
 CC polynucleotides are also used in diagnostics as expressed sequence tags
 CC for identifying expressed genes. (I) is useful in gene therapy techniques
 CC to restore normal activity of (II) or to treat disease states involving
 CC (II). (II) is useful for generating antibodies against it, detecting or
 CC quantitating a polypeptide in tissue, as molecular weight markers and as
 CC a food supplement. (II) and its binding partners are useful in medical
 CC imaging of sites expressing (II). (I) and (II) are useful for treating
 CC disorders involving aberrant protein expression or biological activity.
 CC The polypeptide and polynucleotide sequences have applications in
 CC diagnostics, forensics, gene mapping, identification of mutations
 CC responsible for genetic disorders or other traits to assess biodiversity
 CC and to produce other types of data and products dependent on DNA and
 CC amino acid sequences. ABG00010-ABG30377 represent novel human
 CC diagnostic amino acid sequences of the invention.
 CC Note: The sequence data for this patent did not appear in the printed
 CC specification, but was obtained in electronic format directly from WIPO
 CC at ftp.wipo.int/pub/published_pct_sequences.

XX New isolated nucleic acid molecule for diagnosis, prevention, and
 PT therapy of human and other animal disorder, or as modulating agent for
 PT regulating cellular processes -
 XX Claim 8; Fig 1; 263pp; English.
 XX The sequence represents human TANGO 229 polypeptide. This protein and
 CC similar others exhibit the ability to affect growth, proliferation,
 CC survival, differentiation, activity, morphology, or movement/migration

CC of, e.g. T cells and cells of the heart, liver, pancreas, placenta,
CC brain, lung, skeletal muscle, kidney, spleen, lymph node, peripheral
CC blood leukocyte, bone marrow or thymus tissue. They can be used as
CC modulating agents for regulating cellular processes, thus, the proteins
CC and their associated nucleic acids can be used to prognosticate, prevent,
CC diagnose, or treat disorders associated with physiological processes.
CC These disorders include abnormal blood coagulation, asthma, anaphylaxis,
CC hepatitis, multiple sclerosis, cancer, coronary artery disease, malaria,
CC atopic dermatitis, amyotrophic lateral sclerosis, meningitis, attention
CC deficit disorder, Crohn's disease, gastroenteritis, goitre,
CC hypoglycaemia, diabetes mellitus, endometriosis, pulmonary embolism and
CC muscular dystrophy. Antibodies to disorders such as these can be made by
CC providing a polypeptide of the invention to an immuno-competent
CC vertebrate and harvesting blood or serum from the vertebrate.

PT Novel nucleic acid encoding human CUB-domain containing protein, useful
PT for drug screening, diagnosis and treatment of physiological disorders
PT or diseases -
XX
PS Claim 4; Page 26; 33pp; English.
CC The sequence represents a novel human protein (NHP) containing a CUB
CC domain (an extracellular domain). CUB proteins have been associated with
CC regulating development, modulating cellular processes and preventing
CC infectious disease. NHP nucleotide sequences are useful for gene therapy
CC of physiological disorders or diseases. NHP oligonucleotides are useful
CC as hybridisation probes for screening libraries and assessing gene
CC patterns. NHP nucleotide sequences are useful for detecting mutant or
CC inappropriately expressed NHPs (for example, those proteins associated
CC with obesity, high blood pressure, connective tissue disorders and
CC infertility) for the diagnosis of a disease. The polynucleotides may also
CC be used in screening for drugs effective in the treatment of symptomatic
CC or phenotypic manifestations of perturbing the normal function of NHP in
CC the body. Nucleotide constructs encoding NHP products are used to
CC genetically engineer host cells to express such products in vivo. These
CC host cells allow for the identification of compounds that bind to NHP
CC receptors or trigger NHP-mediated pathways.

 PT Novel isolated human Neuropilin-Hyl and Neuropilin-Hy2 polypeptides
 PT useful for treating neurodegenerative diseases e.g. Alzheimer's
 PT disease, and for diagnosing and mapping genetic neuronal defects
 XX
 PS Claim 3; Page 123-125; 152pp; English.
 XX
 CC The invention relates to neuropilin-like polypeptide (neuropilin-Hyl and
 CC neuropilin-Hy2) and their corresponding nucleic acids. The neuropilin-
 CC like polypeptides and polynucleotides are useful in modulating neuronal
 CC growth regenerative capacity, treating neurodegenerative diseases,
 CC diagnosing and mapping genetic neuronal defects and degenerative diseases
 CC like Alzheimer's disease and for treating learning and memory disorders.
 CC They are also useful for inducing angiogenesis, neovascularisation, as
 CC well as organ growth and development e.g. heart and other tissues.
 CC Antagonists of neuropilin-like polypeptides are useful for treating
 CC cancers and other malignant diseases. Neuropilin is used to treat
 CC platelet disorders e.g. thrombocytopaenia, plastic anaemia and paroxysmal
 CC nocturnal haemoglobinuria and is used in nerve tissue growth or
 CC regeneration, in wound healing, tissue repair and replacement and in
 CC healing of bones, incisions and ulcers. Compositions comprising the
 CC sequences of the invention are useful for treating diseases of peripheral
 CC nervous system e.g. Parkinson's disease, Huntington's disease, Shy-Drager
 CC syndrome, amyotrophic lateral sclerosis, and traumatic disorders e.g.
 CC spinal cord disorders, head trauma and cerebrovascular diseases e.g.
 CC stroke, ulcers, immune deficiencies and immune disorders, infections by
 CC hepatitis viruses, human immunodeficiency virus (HIV), herpes viruses,
 CC mycobacteria, Leishmania spp., malaria spp., autoimmune disorders e.g.
 CC multiple sclerosis, systemic lupus erythematosus, rheumatoid arthritis,
 CC autoimmune pulmonary inflammation, autoimmune thyroiditis, diabetes
 CC mellitus, graft-versus-host disease, myasthenia gravis and autoimmune
 CC inflammatory eye disease. The nucleic acids of the invention are used in
 CC gene therapy techniques. The present sequence is human neuropilin-Hyl
 CC protein. Neuropilin-Hyl gene is located on chromosome 6q21.

RESULT 14

CC modifications in the factor V gene, where (I) expresses an activated
CC protein C (APC) resistant factor V and (II) lacks the ability to express
CC wild-type factor V. The transgenic animals (I) and (II) are useful for
CC screening compounds with anticoagulant activity. Methods from the present
CC invention, and the transgenic animals, are also useful in providing
CC models for human thrombophilia. These models are useful in providing
CC insight into the basic regulatory mechanisms of blood coagulation and
CC pathogenesis of human thrombosis. In addition, factor V null transgenic
CC mice, especially pregnant females may be used as a model system to test
CC in utero gene replacement therapy protocols. The present sequence
CC represents murine factor V, which is used in an example from the present
CC invention.

RL J. Biol. Chem. 275:18040-18045(2000).
[5]
FUNCTION: THE MEMBRANE-BOUND ISOFORM IS A RECEPTOR INVOLVED IN THE DEVELOPMENT OF THE CARDIOVASCULAR SYSTEM, IN ANGIOGENESIS, IN THE FORMATION OF CERTAIN NEURONAL CIRCUITS AND IN ORGANOGENESIS OUTSIDE THE NERVOUS SYSTEM. IT MEDIATES THE CHEMOREPULSANT ACTIVITY OF SEMAPHORINS. IT BINDS TO SEMAPHORIN 3A, THE PLGF-2 ISOFORM OF PGF, THE VEGF-165 ISOFORM OF VEGF AND VEGF-B. COEXPRESSION WITH KDR RESULTS IN INCREASED VEGF-165 BINDING TO KDR AS WELL AS INCREASED CHEMOTAXIS. IT MAY REGULATE VEGF-INDUCED ANGIOGENESIS.
[6]
FUNCTION: THE SOLUBLE/SNRP1 ISOFORM BINDS VEGF-165 AND APPEARS TO INHIBIT ITS BINDING TO CELLS. IT MAY ALSO INDUCE APOPTOSIS BY SEQUESTERING VEGF-165. MAY BIND AS WELL VARIOUS MEMBERS OF THE SEMAPHORIN FAMILY. ITS EXPRESSION HAS AN AVERSE EFFECT ON BLOOD VESSEL NUMBER AND INTEGRITY.
[7]
SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN. THE SOLUBLE/SNRP1 ISOFORM IS SECRETED.
[8]
ALTERNATIVE PRODUCTS: 2 ISOFORMS; MEMBRANE-BOUND (SHOWN HERE) AND SOLUBLE/SNRP1; ARE PRODUCED BY ALTERNATIVE SPLICING.
[9]
TISSUE SPECIFICITY: THE EXPRESSION OF MEMBRANE-BOUND AND SOLUBLE/SNRP1 ISOFORMS DOES NOT SEEM TO OVERLAP. THE MEMBRANE-BOUND ISOFORM IS EXPRESSED BY THE BLOOD VESSELS OF DIFFERENT

```

RL Cell. Mol. Life Sci. 58:148-159(2001).
CC -|- FUNCTION: Coagulation factor V is a cofactor that participates
CC with factor Xa to activate prothrombin to thrombin.
CC -|- SUBUNIT: Factor Va is composed of a heavy chain and a light
CC chain, noncovalently bound. The interaction between the two chains
CC is calcium-dependent.
CC -|- DOMAIN: Domain B contains 41 X 9 AA tandem repeats. Domains C1
CC and C2 may be involved in membrane binding.
CC -|- PTM: Thrombin activates factor V proteolytically to the active
CC cofactor, factor Va (formation of a heavy chain at the N-
CC terminus and a light chain at the C-terminus).
CC -|- SIMILARITY: CONTAINS 3 F5/8 TYPE A DOMAINS; EACH IS COMPOSED OF
CC 2 PLASTOCYANIN-LIKE REPEATS.
CC -|- SIMILARITY: CONTAINS 2 F5/8 TYPE C DOMAINS.
CC -|- SIMILARITY: STRONG, TO COAGULATION FACTOR VIII.

COMMENT NEDO human cDNA sequencing project supported by Ministry of
Economy, Trade and Industry of Japan; cDNA full insert sequencing:
Research Association for Biotechnology (RAB); cDNA library
construction: Helix Research Institute (HRI) (supported by Japan
Key Technology Center etc.); 5'- & 3'-end one pass sequencing: RAB,
HRI, and Biotechnology Center, National Institute of Technology and
Evaluation; clone selection for full insert sequencing: RAB and
HRI.

----- Project Information
Center project name: L7942
Center clone name: 322_A_20

* NOTE: This record contains 164 individual
* sequencing reads that have not been assembled into
* contigs. Runs of N are used to separate the reads
* and the order in which they appear is completely
* arbitrary. Low-pass sequence sampling is useful for
* identifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
* the record is updated, the accession number will
* be preserved.

* 1

 Center clone name: CTD-2011L5

 Summary Statistics

 Sequencing vector: Plasmid;
 Chemistry: Dye-terminator Big Dye; 100% of reads
 Assembly program: Phrap; version 0.990329
 Consensus quality: 161549 bases at least Q40

Consensus quality: 162327 bases at least Q30
 Consensus quality: 162604 bases at least Q20
 Estimated insert size: 157933; sum-of-contigs estimation
 Quality coverage: 7x in Q20 bases; sum-of-contigs estimation

 * NOTE: Estimated insert size may differ from sequence length
 (see http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html).
 * NOTE: This is a working draft sequence. It currently
 consists of 8 contigs. The true order of the pieces
 is not known and their order in this sequence record is
 arbitrary. Gaps between the contigs are represented as
 runs of N, but the exact sizes of the gaps are unknown.
 * This record will be updated with the finished sequence
 as soon as it is available and the accession number will
 be preserved.
 *
 *
 * 1 3452: contig of 3452 bp in length
 * 3453 3552: gap of unknown length

 * NOTE: This record contains 75 individual
 * sequencing reads that have not been assembled into
 * contigs. Runs of N are used to separate the reads
 * and the order in which they appear is completely
 * arbitrary. Low-pass sequence sampling is useful for
 * identifying clones that may be gene-rich and allows
 * overlap relationships among clones to be deduced.
 * However, it should not be assumed that this clone
 * will be sequenced to completion. In the event that
 * the record is updated, the accession number will
 * be preserved.
 *

Center clone name: 319.J.24
----- Summary Statistics
Sequencing vector: M13: M7815; 100% of reads
Assembly: Dye-terminator Big Dye; 100% of reads
Assembly program: Phrap; version 0.960731
Consensus quality: 182870 bases at least Q40
Consensus quality: 187032 bases at least Q30
Consensus quality: 186925 bases at least Q20
Insert size: 194000; agarose-fp
Insert size: 191247; sum-of-ctngs
Quality coverage: 5.0 in Q20 bases; agarose-fp
Quality coverage: 5.1 in Q20 bases; sum-of-ctngs
-----
* NOTE: This is a 'working draft' sequence. It currently
* consists of 11 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence

```

```

* as soon as it is available and the accession number will
* be preserved.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

/product= "Human neurophilin-Hy2 protein"
/note= "This region designated as SEQ.ID.NO:8 is

CC diseases, and neuropathies, such as Parkinson's disease,
CC Huntington's disease, amyotrophic lateral sclerosis, to regulate
CC haematopoiesis and treat myeloid and lymphoid cell disorders, various
CC anaemias, and platelet disorders, such as thrombocytopaenia,
CC regeneration and treatment of lung or liver fibrosis, reperfusion
CC injury in various tissues and as a food supplement or molecular
CC weight marker. The cDNAs are useful in gene identification, genome
CC mapping, transgenics, as hybridisation probes, for primer design, for
CC gene chips and as a DNA antigen. The present sequence encodes
CC neuropilin-Hy2.

PT An isolated polynucleotide for treating diseases associated with its
PT encoded polypeptide such as cancer and multiple sclerosis -
XX
PS Claim 1; SEQ ID NO 210; 509pp; English.
XX
CC The present invention provides the protein and coding sequences of 444
CC novel human proteins. These were isolated from expressed sequences tags
CC (ESTs). They can be used to stimulate cell growth, to regulate
CC haematopoiesis e.g. to treat aplastic anaemia, to help tissue regrowth
CC e.g. in burn treatment, to regulate the immune system e.g. to treat
CC multiple sclerosis, to regulate activin or inhibit e.g. to treat
CC infertility, to regulate haemostasis or thrombolysis e.g. to treat
CC stroke and cancer, to screen for drugs, to treat inflammatory conditions
CC e.g. rheumatoid arthritis, and to treat nervous system disorders e.g.
CC Parkinson's disease. The present sequence is a coding sequence of the
CC invention.

PT Nucleic acids encoding 4277 human colon cancer-associated polypeptides,
PT useful for preventing, diagnosing and/or treating colorectal cancers -
XX
PS Claim 1; Page 3444-3445; 9803pp; English.
XX
CC AAH32943 to AAH37195 and AAG73514 to AAG77788 represent human colon
CC cancer-associated nucleic acid molecules (N) and proteins (P), where
CC the proteins are collectively known as colon cancer antigens. The colon
CC cancer antigens have cytostatic activity and can be used in gene
CC therapy and vaccine production. N and P may be used in the prevention,
CC diagnosis and treatment of diseases associated with inappropriate P
CC expression. For example, N and P may be used to treat disorders
CC associated with decreased expression by rectifying mutations or deletions
CC in a patient's genome that affect the activity of P by expressing
CC inactive proteins or to supplement the patients own production of P.
CC Additionally, N may be used to produce the colon cancer-associated P,
CC by inserting the nucleic acids into a host cell and culturing the cell
CC to express the proteins. N and P can be used in the prevention, diagnosis
CC and treatment of colorectal carcinomas and cancers. AAH37196 to AAH37204
CC and AAB7789 represent sequences used in the exemplification of the
CC present invention.
CC N.B. Pages 666 to 682 and page 7053 of the sequence listing were
CC missing at time of publication, meaning no sequences are present for
CC SEQ ID NO:1027 to 1052, 7921 and 7922.

XX
XX Novel polypeptides and polynucleotides useful for diagnosing,
XX preventing, treating neural, immune system, muscular, reproductive,
XX pulmonary, cardiovascular, renal, proliferative disorders and cancerous
XX diseases -
XX
XX Claim 4; SEQ ID NO 374; 1180pp; English.
XX
XX The present invention relates to the isolation of novel human enzyme
XX polypeptides (AAU22915-AAU23814), and the cDNA and genomic sequences
XX encoding them. The enzyme polypeptides of the invention may comprise the
XX functional classes of oxidoreductases, transferases, hydrolases, lyases,
XX isomerases or ligases. The sequences of the invention are useful in the
XX diagnosis, treatment, prevention and/or prognosis of a wide range of
XX disorders including hyperproliferative disorders (e.g. cancer),
XX immunodeficiency disorders (e.g. AIDS) autoimmune disorders
XX (e.g. arthritis), neurological disorders (e.g. Alzheimer's disease),
XX metabolic disorders (e.g. phenylketonuria), inflammatory disorders
XX (e.g. asthma), cardiovascular disorders (e.g. atherosclerosis),
XX blood-related disorders (e.g. haemophilia), reproductive disorders
XX (e.g. infertility) and infectious disorders (e.g. influenza). The
XX polynucleotides of the invention can also be used in gene therapy.
XX AAS40785-AAS41684 represent cDNA sequences encoding for the novel human
XX enzyme polypeptides of the invention.
XX Note: The sequence data for this patent did not form part of the printed
XX specification, but was obtained in electronic format directly from WIPO
XX at ftp.wipo.int/pub/published_pct_sequences.

XX Human genome-derived single exon nucleic acid probes useful for
XX analyzing gene expression in human fetal liver -
XX
XX Claim 1; SEQ ID NO 9303; 639pp + sequence listing; English.
XX
XX The invention relates to a single exon nucleic acid probe for
XX measuring human gene expression in a sample derived from human foetal
XX liver. The single exon nucleic acid probes may be used for predicting,
XX measuring and displaying gene expression in samples derived from human
XX foetal liver. The present sequence is a single exon nucleic acid
XX probe of the invention.
XX Note: The sequence data for this patent did not form part of the
XX printed specification, but was obtained in electronic format directly
XX from WIPO at ftp.wipo.int/pub/published_pct_sequences.

 PT Spatially-addressable set of single exon nucleic acid probes, used to
 PT measure gene expression in human lung samples -
 XX
 PS Claim 1; SEQ ID No 9606; 634pp; English.
 XX
 CC The invention relates to a spatially-addressable set of single exon
 CC nucleic acid probes for measuring gene expression in a sample derived
 CC from human lung comprising single exon nucleic acid probes having one of
 CC 12614 nucleic acid sequences mentioned in the specification, or their
 CC complements or the 12387 open reading frames derived from the 12614
 CC probes. Also included are a microarray comprising the novel set of
 CC nucleic acid expressed in the human lung; measuring gene expression to a
 CC sample derived from human lung, comprising (a) contacting the array with
 CC mRNA, and (b) measuring the label detectably bound to each probe of
 CC the array; identifying exons in a eukaryotic genome, comprising
 CC (a) algorithmically predicting at least one exon from genomic sequences
 CC of the eukaryote; and (b) detecting specific hybridisation of detectably
 CC labeled nucleic acids from eukaryote lung mRNA, to a single exon probe,
 CC having a fragment identical to the predicted exon, the probe is included
 CC in the above mentioned microarray; assigning exons to a single gene,
 CC comprising (a) identifying exons from genomic sequence by the method

CC above and (b) measuring the expression of each of the exons in several
 CC tissues and/or cell types using hybridisation to a single exon
 CC microarrays having a probe with the exon, where a common pattern of
 CC expression of the exons in the tissues and/or cell types indicates that
 CC the exons should be assigned to a single gene; a peptide comprising one
 CC of 12011 sequences, mentioned in the specification, or encoded by the
 CC probes/open reading frames (ORF). The probes are used for gene
 CC expression analysis, and for identifying exons in a gene, particularly
 CC using human lung derived mRNA and for the study of lung diseases
 CC such as asthma, lung cancer, chronic obstructive pulmonary disease
 CC (COPD), interstitial lung disease (ILD), familial idiopathic pulmonary
 CC fibrosis, neurofibromatosis, tuberous sclerosis, Gaucher's disease,
 CC Niemann-Pick disease, Hermansky-Pudlak syndrome, sarcoidosis, pulmonary
 CC haemosiderosis, pulmonary histiocytosis, lymphangioleiomyomatosis,
 CC pulmonary alveolar proteinosis, Karagener syndrome, fibrocystic
 CC pulmonary dysplasia, primary ciliary dyskinesia, pulmonary hypertension
 CC and hyaline membrane disease. The present sequence is a single exon
 CC probe of the invention.
 CC Note: The sequence data for this patent did not form part
 CC of the printed specification, but was obtained in electronic
 CC format directly from WIPO at
 CC ftp.wipo.int/pub/published_pct_sequences.

XX CC complements or the 12614 open reading frames derived from the 12614
XX CC probes. Also included are a microarray comprising the novel set of
XX CC probes; the novel set of probes which hybridise at high stringency to a
XX CC nucleic acid expressed in the human lung; measuring gene expression in a
XX CC sample derived from human lung, comprising (a) contacting the array with
XX CC a collection of detectably labeled nucleic acids derived from human lung
XX CC mRNA, and (b) measuring the label detectably bound to each probe of
XX CC the array; identifying exons in a eukaryotic genome, comprising
XX CC (a) algorithmically predicting at least one exon from genomic sequences
XX CC of the eukaryote; and (b) detecting specific hybridisation of detectably
XX CC labeled nucleic acids from eukaryote lung mRNA, to a single exon probe,
XX CC having a fragment identical to the predicted exon, the probe is included
XX CC in the above mentioned microarray; assigning exons to a single gene,
XX CC comprising (a) identifying exons from genomic sequence by the method
XX CC above and (b) measuring the expression of each of the exons in several
XX CC tissues and/or cell types using hybridisation to a single exon
XX CC microarrays having a probe with the exon, where a common pattern of
XX CC expression of the exons in the tissues and/or cell types indicates that
XX CC the exons should be assigned to a single gene; a peptide comprising one
XX CC of 12011 sequences, mentioned in the specification, or encoded by the
XX CC probes/open reading frames (ORF). The probes are used for gene
XX CC expression analysis, and for identifying exons in a gene, particularly
XX CC using human lung derived mRNA and for the study of lung diseases
XX CC such as asthma, lung cancer, chronic obstructive pulmonary disease
XX CC (COPD), interstitial lung disease (ILD), familial idiopathic pulmonary
XX CC fibrosis, neurofibromatosis, tuberous sclerosis, Gaucher's disease,
XX CC Niemann-Pick disease, Hermansky-Pudlak syndrome, sarcoidosis, pulmonary
XX CC haemosiderosis, pulmonary histiocytosis, lymphangioleiomyomatosis,
XX CC pulmonary alveolar proteinosis, Karagener syndrome, fibrocystic
XX CC pulmonary dysplasia, primary ciliary dyskinesia, pulmonary hypertension
XX CC and hyaline membrane disease. The present sequence is a single exon
XX CC probe open reading frame of the invention.
XX CC Note: The sequence data for this patent did not form part
XX CC of the printed specification, but was obtained in electronic
XX CC format directly from WIPO at
XX CC ftp.wipo.int/pub/published_pct_sequences.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

XX PT Novel isolated human Neuropilin-Hy1 and Neuropilin-Hy2 polypeptides
 PT useful for treating neurodegenerative diseases e.g. Alzheimer's
 PT disease, and for diagnosing and mapping genetic neuronal defects
 XX PS Disclosure; Page 131-132; 152pp; English.

XX CC The invention relates to neuropilin-like polypeptide (neuropilin-Hy1 and

CC neuropilin-Hy2) and their corresponding nucleic acids. The neuropilin-
 CC like polypeptides and polynucleotides are useful in modulating neuronal
 CC growth regenerative capacity, treating neurodegenerative diseases,
 CC diagnosing and mapping genetic neuronal defects and degenerative diseases
 CC like Alzheimer's disease and for treating learning and memory disorders.
 CC They are also useful for inducing angiogenesis, neovascularisation, as
 CC well as organ growth and development e.g. heart and other tissues.
 CC Antagonists of neuropilin-like polypeptides are useful for treating
 CC cancers and other malignant diseases. Neuropilin is used to treat
 CC platelet disorders e.g. thrombocytopenia, plastic anaemia and paroxysmal
 CC nocturnal haemoglobinuria and is used in nerve tissue growth or
 CC regeneration. In wound healing, tissue repair and replacement and in
 CC healing of bones, incisions and ulcers. Compositions comprising the
 CC sequences of the invention are useful for treating diseases of peripheral
 CC nervous system e.g. Parkinson's disease, Huntington's disease, Shy-Drager
 CC syndrome, amyotrophic lateral sclerosis, and traumatic disorders e.g.
 CC spinal cord disorders, head trauma and cerebrovascular diseases e.g.
 CC stroke, ulcers, immune deficiencies and immune disorders, infections by
 CC hepatitis viruses, human immunodeficiency virus (HIV), herpes viruses,
 CC mycobacteria, Leishmania spp., malaria spp., autoimmune disorders e.g.
 CC multiple sclerosis, systemic lupus erythematosus, rheumatoid arthritis,
 CC autoimmune pulmonary inflammation, autoimmune thyroiditis, diabetes
 CC mellitus, graft-versus-host disease, myasthenia gravis and autoimmune
 CC inflammatory eye disease. The nucleic acids of the invention are used in
 CC gene therapy techniques. The present sequence is human neuropilin-Hy2
 CC mature protein.

 XX Human genome-derived single exon nucleic acid probes useful for
 PT analyzing gene expression in human fetal liver -
 XX
 XX Claim 27; SEQ ID NO 34852; 639pp + sequence listing; English.
 XX
 CC The invention relates to a single exon nucleic acid probe for
 CC measuring human gene expression in a sample derived from human foetal
 CC liver. The single exon nucleic acid probes may be used for predicting,
 CC measuring and displaying gene expression in samples derived from human
 CC fetal liver. The present sequence is a peptide encoded by a single exon
 CC nucleic acid probe of the invention.
 CC Note: The sequence data for this patent did not form part of the
 CC printed specification, but was obtained in electronic format directly
 CC from WIPO at ftp.wipo.int/pub/published_pct_sequences.

 PT Single exon nucleic acid probes for analyzing gene expression in human
 PT brains -

XX Example 4; SEQ ID NO: 35207; 650pp + Sequence Listing; English.
 XX
 CC The present invention provides a number of single exon nucleic acid
 CC probes which are derived from genomic sequences expressed in the human
 CC brain. They can be used to measure gene expression in brain cell samples,
 CC which may enable the diagnosis and improved treatment of nervous system
 CC diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia,
 CC epilepsy and cancers. The present sequence is a protein encoded by one of
 CC the probes of the invention.

 PT Human genome-derived single exon nucleic acid probes useful for
 PT analyzing gene expression in human bone marrow -
 XX
 XX Example 4; SEQ ID NO: 36219; 658pp + Sequence Listing; English.
 XX
 CC The present invention provides a number of single exon nucleic acid
 CC probes which are derived from genomic sequences expressed in the human
 CC bone marrow. They can be used to measure gene expression in bone marrow
 CC samples, which may enable the improved diagnosis and treatment of cancers
 CC such as lymphoma, leukaemia and myeloma. The present sequence is a
 CC protein encoded by one of the probes of the invention.

PT Spatially-addressable set of single exon nucleic acid probes, used to
XX measure gene expression in human lung samples -
XX
PS Claim 27; SEQ ID No 35014; 634pp; English.
XX
CC The invention relates to a spatially-addressable set of single exon
XX nucleic acid probes for measuring gene expression in a sample derived
XX from human lung comprising single exon nucleic acid probes having one of
XX 12614 nucleic acid sequences mentioned in the specification, or their
XX complements or the 12387 open reading frames derived from the 12614
XX probes. Also included are a microarray comprising the novel set of
XX probes; the novel set of probes which hybridise at high stringency to a
XX nucleic acid expressed in the human lung; measuring gene expression in a
XX sample derived from human lung, comprising (a) contacting the array with
XX a collection of detectably labeled nucleic acids derived from human lung
XX mRNA, and (b) measuring the label detectably bound to each probe of
XX the array; identifying exons in a eukaryotic genome, comprising
XX (a) algorithmically predicting at least one exon from genomic sequences
XX of the eukaryote; and (b) detecting specific hybridisation of detectably
XX labeled nucleic acids from eukaryote lung mRNA, to a single exon probe,
XX having a fragment identical to the predicted exon, the probe is included
XX in the above mentioned microarray; assigning exons to a single gene,
XX comprising (a) identifying exons from genomic sequence by the method
XX above and (b) measuring the expression of each of the exons in several

```

CC tissues and/or cell types using hybridisation to a single exon
 CC microarrays having a probe with the exon, where a common pattern of
 CC expression of the exons in the tissues and/or cell types indicates that
 CC the exons should be assigned to a single gene; a peptide comprising one
 CC of 12011 sequences, mentioned in the specification, or encoded by the
 CC probes/open reading frames (ORF). The probes are used for gene
 CC expression analysis, and for identifying exons in a gene, particularly
 CC using human lung derived mRNA and for the study of lung diseases
 CC such as asthma, lung cancer, chronic obstructive pulmonary disease
 CC (COPD), interstitial lung disease (ILD), familial idiopathic pulmonary
 CC fibrosis, neurofibromatosis, tuberous sclerosis, Gaucher's disease,
 CC Niemann-Pick disease, Hermansky-Pudlak syndrome, sarcoidosis, pulmonary
 CC hamangioleiomyomatosis, pulmonary histiocytosis, lymphangioleiomyomatosis,
 CC pulmonary alveolar proteinosis, Karagener syndrome, fibrocystic
 CC and hyaline membrane disease. The present sequence is a peptide/protein
 CC encoded by a single exon probe of the invention.
 CC Note: The sequence data for this patent did not form part
 CC of the printed specification, but was obtained in electronic
 CC format directly from WIPO at
 CC ftp.wipo.int/pub/published_pct_sequences.

XX Novel isolated human Neuropilin-Hy1 and Neuropilin-Hy2 polypeptides
 PT useful for treating neurodegenerative diseases e.g. Alzheimer's
 PT disease, and for diagnosing and mapping genetic neuronal defects

XX Disclosure: Page 130-131; 152pp; English.

XX The invention relates to neuropilin-like polypeptide (neuropilin-Hy1 and
 CC neuropilin-Hy2) and their corresponding nucleic acids. The neuropilin-
 CC like polypeptides and polynucleotides are useful in modulating neuronal
 CC growth regenerative capacity, treating neurodegenerative diseases,
 CC diagnosing and mapping genetic neuronal defects and degenerative diseases
 CC like Alzheimer's disease and for treating learning and memory disorders.
 CC They are also useful for inducing angiogenesis, neovascularisation, as
 CC well as organ growth and development e.g. heart and other tissues.
 CC Antagonists of neuropilin-like polypeptides are useful for treating
 CC cancers and other malignant diseases. Neuropilin is used to treat
 CC platelet disorders e.g. thrombocytopaenia, plastic anaemia and paroxysmal
 CC nocturnal haemoglobinuria and is used in nerve tissue growth or
 CC regeneration, in wound healing, tissue repair and replacement and in
 CC healing of bones, incisions and ulcers. Compositions comprising the
 CC sequences of the invention are useful for treating diseases of peripheral
 CC nervous system e.g. Parkinson's disease, Huntington's disease, Shy-Drager
 CC syndrome, amyotrophic lateral sclerosis, and traumatic disorders e.g.
 CC spinal cord disorders, head trauma and cerebrovascular diseases e.g.
 CC stroke, ulcers, immune deficiencies and immune disorders, infections by
 CC hepatitis viruses, human immunodeficiency virus (HIV), herpes viruses,
 CC mycobacteria, Leishmania spp., malaria spp., autoimmune disorders e.g.
 CC multiple sclerosis, systemic lupus erythematosus, rheumatoid arthritis,
 CC autoimmune pulmonary inflammation, autoimmune thyroiditis, diabetes
 CC mellitus, graft-versus-host disease, myasthenia gravis and autoimmune
 CC inflammatory eye disease. The nucleic acids of the invention are used in
 CC gene therapy techniques. The present sequence is human neuropilin-Hy2
 CC signal peptide.

XX Claim 20; SEQ ID No 36363; 103pp; English.
PS
XX The invention relates to isolated polynucleotide (I) and
CC polypeptide (II) sequences. (I) is useful as hybridisation probes,
CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome
CC ad and gene mapping, and in recombinant production of (II). The
CC polynucleotides are also used in diagnostics as expressed sequence tags
CC for identifying expressed genes. (I) is useful in gene therapy techniques
CC to restore normal activity of (II) or to treat disease states involving
CC (II). (II) is useful for generating antibodies against it, detecting or
CC quantitating a polypeptide in tissue, as molecular weight markers and as
CC a food supplement. (II) and its binding partners are useful in medical
CC imaging of sites expressing (II). (I) and (II) are useful for treating
CC disorders involving aberrant protein expression or biological activity.
CC The polypeptide and polynucleotide sequences have applications in
CC diagnostics, forensics, gene mapping, identification of mutations
CC responsible for genetic disorders or other traits to assess biodiversity
CC and to produce other types of data and products dependent on DNA and
CC amino acid sequences. ABG00010-ABG30377 represent novel human
CC diagnostic amino acid sequences of the invention.
CC Note: The sequence data for this patent did not appear in the printed
CC specification, but was obtained in electronic format directly from WIPO

 XX
 CC The invention relates to the isolation of genes AAC59679-c59728 encoding
 CC the human secreted proteins AAB38971-B39020. This sequence represents a
 CC peptide fragment homologous to the protein encoded by the gene isolated
 CC in the present invention. The sequence is a search result from a BLASTX
 CC homology search. The genes and proteins are useful for preventing,
 CC ameliorating or treating medical conditions, e.g. by protein or gene
 CC therapy. The genes are isolated from a range of human tissues disclosed
 CC in the specification. The nucleic acids, proteins, antibodies and
 CC (ant)agonists are useful in the diagnosis, treatment and prevention of:
 CC (a) cancer, e.g. breast and ovarian cancer, and other cancers of the
 CC adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver,
 CC lung, or urogenital; (b) immune disorders e.g. Addison's disease,
 CC allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis,

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

RL Submitted (MAY-2002) to the EMBL/GenBank/DBJ databases.
CC -1- FUNCTION: REQUIRED FOR ASSEMBLING ACTIN AT RING CANALS IN
CC DEVELOPING EGG CHAMBERS. PROBABLY INTERACTS WITH OTHER
CC DEVELOPMENTAL PROTEINS INVOLVED IN NURSE CELL/OOCYTE TRANSPORT
CC THROUGH THE RING CANALS.
CC -1- ALTERNATIVE PRODUCTS: 2 ISOFORMS; A LONG FORM (SHOWN HERE) AND
CC A SHORT FORM; MAY BE PRODUCED BY ALTERNATIVE SPLICING.
CC -1- DEVELOPMENTAL STAGE: OOGENESIS AND EARLY EMBRYOGENESIS.
CC -1- MISCELLANEOUS: 'HU-LI TAI SHAO' MEANS 'TOO LITTLE NURSING' IN
CC CHINESE.
CC -1- SIMILARITY: BELONGS TO THE ALDOLASE CLASS II FAMILY. ADDUCIN
CC SUBFAMILY.
CC -1- CAUTION: Ref.3 sequence differs from that shown due to erroneous
CC gene model prediction.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

NEDO human cDNA sequencing project supported by Ministry of
Economy, Trade and Industry of Japan; cDNA full insert sequencing:
Research Association for Biotechnology (RAB); cDNA library
construction: Helix Research Institute (HRI) (supported by Japan
Key Technology Center etc.); 5'- & 3'-end one pass sequencing: RAB,
HRI, and Biotechnology Center, National Institute of Technology and
Evaluation; clone selection for full insert sequencing: RAB and
HRI.

 XX Factor 8 homolog polypeptides and nucleic acids encoding them for
 PT treating coagulation related disorders such as hemophilia and stroke
 XX Claim 3; Page 64-66; 68pp; English.
 XX The present sequence is a human Factor 8 homologue (F8H),
 CC a coagulation cofactor which is selectively expressed in
 CC haematopoietic, heart and reproductive tissues. It has haemostatic and
 CC cerebroprotective activities. The F8H contains a Factor 5/8 signature
 CC and is useful as a therapeutic for treating coagulation related diseases
 CC such as haemophilia and stroke. The nucleic acid is useful as
 CC hybridisation probe and amplification primer for detecting deficiencies
 CC in the level of F8H mRNA, for screening F8H gene mutations and for
 CC monitoring regulation of gene expression. Fragments of the nucleic acid
 CC are also useful as diagnostic probes and primers, and can be used in
 CC screening methods such as those using DNA chips. The present sequence is
 CC also useful as a target to screen therapeutically useful modulators
 CC of the F8H.

 PT Novel isolated human Neuropilin-Hy1 and Neuropilin-Hy2 polypeptides
 PT useful for treating neurodegenerative diseases e.g. Alzheimer's
 PT disease, and for diagnosing and mapping genetic neuronal defects
 XX
 PS Claim 3; Page 128-130; 152pp; English.
 CC
 CC The invention relates to neuropilin-like polypeptide (neuropilin-Hy1 and
 CC neuropilin-Hy2) and their corresponding nucleic acids. The neuropilin-
 CC like polypeptides and polynucleotides are useful in modulating neuronal
 CC growth regenerative capacity, treating neurodegenerative diseases,
 CC diagnosing and mapping genetic neuronal defects and degenerative diseases.
 CC like Alzheimer's disease and for treating learning and memory disorders.
 CC They are also useful for inducing angiogenesis, neovascularisation, as
 CC well as organ growth and development e.g. heart and other tissues.
 CC Antagonists of neuropilin-like polypeptides are useful for treating
 CC cancers and other malignant diseases. Neuropilin is used to treat
 CC platelet disorders e.g. thrombocytopaenia, plastic anaemia and paroxysmal
 CC nocturnal haemoglobinuria and is used in nerve tissue growth or
 CC regeneration, in wound healing, tissue repair and replacement and in
 CC healing of bones, incisions and ulcers. Compositions comprising the
 CC sequences of the invention are useful for treating diseases of peripheral
 CC nervous system e.g. Parkinson's disease, Huntington's disease, Shy-Drager
 CC syndrome, amyotrophic lateral sclerosis, and traumatic disorders e.g.
 CC spinal cord disorders, head trauma and cerebrovascular diseases e.g.
 CC stroke, ulcers, immune deficiencies and immune disorders, infections by
 CC hepatitis viruses, human immunodeficiency virus (HIV), herpes viruses,
 CC mycobacteria, Leishmania spp., malaria spp., autoimmune disorders e.g.
 CC multiple sclerosis, systemic lupus erythematosus, rheumatoid arthritis,
 CC autoimmune pulmonary inflammation, autoimmune thyroiditis, diabetes
 CC mellitus, graft-versus-host disease, myasthenia gravis and autoimmune
 CC inflammatory eye disease. The nucleic acids of the invention are used in
 CC gene therapy techniques. The present sequence is human neuropilin-Hy2
 CC protein. Neuropilin-Hy2 gene is located on chromosome 6q21.

XX PT New isolated polynucleotide and encoded polypeptides, useful in
XX PT diagnostics, forensics, gene mapping, identification of mutations
XX PT responsible for genetic disorders or other traits and to assess
XX PT biodiversity

PS Claim 20; SEQ ID No 31657; 103pp; English.

XX. The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG0010-ABG30377 represent novel human diagnostic amino acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

XX PT New isolated nucleic acid molecule for diagnosis, prevention, and therapy of human and other animal disorder, or as modulating agent for regulating cellular processes -
XX PS Claim 8; Fig 1; 263pp; English.
XX CC The sequence represents human TANGO 229 polypeptide. This protein and similar others exhibit the ability to affect growth, proliferation, survival, differentiation, activity, morphology, or movement/migration of, e.g. T cells and cells of the heart, liver, pancreas, placenta, brain, lung, skeletal muscle, kidney, spleen, lymph node, peripheral blood leukocyte, bone marrow or thymus tissue. They can be used as modulating agents for regulating cellular processes, thus, the proteins and their associated nucleic acids can be used to prognosticate, prevent, diagnose, or treat disorders associated with physiological processes. These disorders include abnormal blood coagulation, asthma, anaphylaxis, hepatitis, multiple sclerosis, cancer, coronary artery disease, malaria, atopic dermatitis, amyotrophic lateral sclerosis, meningitis, attention deficit disorder, Crohn's disease, gastroenteritis, goitre, hypoglycaemia, diabetes mellitus, endometriosis, pulmonary embolism and muscular dystrophy. Antibodies to disorders such as these can be made by providing a polypeptide of the invention to an immuno-competent

CC vertebrate and harvesting blood or serum from the vertebrate.

 Polypeptide expressed in mammalian fsn +/- lymph node stromal cells,
 useful for modulating growth of blood cells, for treating inflammatory
 and tumour necrosis factor-mediated disorders, cancer and viral
 disorders
 Claim 1; Page 68-69; 75pp; English.
 The present sequence represents a polypeptide sequence which is
 isolated from lymph node stromal cells of fsn +/- mice. The
 polynucleotides and their polypeptides are useful for treating an
 inflammatory disorder, disorder of immune system and cancer selected
 from epithelial, lymphoid, myeloid, stromal and neuronal cancers, a
 viral disorder, in particular HIV infection and for modulating the
 growth of blood vessels. The polypeptides are useful for treating a
 tumour necrosis factor (TNF) mediated disorder, such as those selected
 from arthritis, inflammatory bowel disease and cardiac failure and a
 fibroblast growth factor-mediated disorder. It is also useful in assays
 to determine biological activity, to raise antibodies, to isolate
 corresponding ligands or receptors, to quantify levels of protein or
 cognate corresponding ligand or receptors, as anti-inflammatory agents,
 and in compositions for the treatment of skin, connective tissue and
 immune system diseases. The polynucleotide is useful as marker for
 tissue, as a chromosome marker or tags in the identification of a
 genetic disorder.

XX XX
XX PS Claim 3; Page 118-120; 144pp; English.
XX XX
XX CC The invention relates to an isolated neuropilin-like polypeptide
CC including neuropilin-Hy1 and neuropilin-Hy2, the full length cDNAs
CC encoding the proteins and the coding regions of the cDNAs. Also included
CC is a nucleic acid array comprising the cDNAs attached to a surface used
CC for detecting full-matches or mismatches to the cDNAs. The genes
CC for neuropilin-Hy1 and Hy2 are located on human chromosome 6q21.
CC The nucleic acid array is useful for detecting full-matches or mismatches
CC to the cDNAs. The neuropilin-like proteins and encoding cDNAs are useful
CC in modulating neuronal growth, regenerative capacity, treating
CC neurodegenerative diseases, learning and memory disorders, diagnosing and
CC mapping genetic neuronal defects and degenerative diseases like
CC Alzheimer's disease, for inducing angiogenesis, and neovascularisation
CC and organ growth and development (e.g. the heart). The nervous system
CC disorders include lesions of central or peripheral nervous systems,
CC including traumatic lesions, ischaemic lesions, infectious lesions,
CC degenerative lesions, lesions associated with nutritional diseases or
CC disorders, neurological lesions, and lesions caused by toxic substances.
CC The neuropilin-like proteins and cDNAs are also useful as markers for
CC cancers. The neuropilin-like proteins are useful for regulating cell
CC proliferation, cell differentiation, stem cell growth factor activity,
CC for inducing proliferation of neural cells, regeneration of nerve and
CC brain tissue, for treatment of central and peripheral nervous system
CC diseases, and neuropathies, such as Parkinson's disease,
CC Huntington's disease, amytrophic lateral sclerosis, to regulate
CC haematopoiesis and treat myeloid and lymphoid cell disorders, various
CC anaemias, and platelet disorders, such as thrombocytopaenia,
CC regeneration and treatment of lung or liver fibrosis, reperfusion

CC	injury in various tissues and as a food supplement or molecular weight marker. The cDNAs are useful in gene identification, genome mapping, transgenics, as hybridisation probes, for primer design, for gene chips and as a DNA antigen. The present sequence represents neuroligin-Hy1.

US-08-936-135-21

; Sequence 21, Application US/08936135

; Patent No. 6054293

; GENERAL INFORMATION:

; APPLICANT: Tessier-Lavigne, Marc

; APPLICANT: He, Zhigang

; APPLICANT: Chen, Hang

; TITLE OF INVENTION: Semaphorin Receptors

; NUMBER OF SEQUENCES: 26

; CORRESPONDENCE ADDRESS:

; ADDRESSEE: SCIENCE & TECHNOLOGY LAW GROUP

; STREET: 75 DENISE DRIVE

; CITY: HILLSBOROUGH

RESULT 6

AK056350 2020 bp mRNA linear PRI 01-AUG-2002
 LOCUS Homo sapiens cDNA FLJ31788 fls, clone NT2R12008598, weakly similar
 DEFINITION to MILK FAT GLOBULE-EGF FACTOR 8 PRECURSOR.
 ACCESSION AK056350
 VERSION AK056350.1 GI:16551729
 KEYWORDS oligo capping; fis (full insert sequence).
 SOURCE Homo sapiens teratocarcinoma cell_line:NT2 cDNA to mRNA,
 clone_11b:NT2R12 clone:NT2R12008598.

ORGANISM

Homo sapiens
 Eukaryota; Chordata; Craniata; Vertebrata; Euteleostomi;
 Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo.

REFERENCE

Submitted (24-OCT-2001) Takao Isogai, Helix Research Institute,
 Genomics Laboratory; 1532-3 Yana, Kisarazu, Chiba 292-0812, Japan
 (E-mail: genomics@hri.co.jp, Tel: 81-438-52-3975, Fax: 81-438-52-3986)
 NEDO human cDNA sequencing project supported by Ministry of
 Economy, Trade and Industry of Japan; cDNA full insert sequencing:
 Research Association for Biotechnology (RAB); cDNA library
 construction: Helix Research Institute (HRI) (supported by Japan
 Key Technology Center etc.); 5'- & 3'-end one pass sequencing: RAB,
 HRI, and Biotechnology Center, National Institute of Technology and
 Evaluation; clone selection for full insert sequencing: RAB and
 HRI.
